SVARAA LITE · V1

Screen visualisations

High-fidelity renders of the V1 web app, Gateway and setup screens, generated from the PRD & Wireframes and the Brand identity & UI specification.

Vishwajeet J K · Svaraa Ventures Inc.

28 screens across 11 flows · 24 rendered, 4 to be added · 27 Sep 2026

AI-generated visualisations for look and feel. Where a render differs from the spec, its page says so; the PRD and the brand deck remain the source of truth.

CONTENTS

Twenty-eight screens across eleven flows

pending render made, to be added

01 · Shell and home

Desktop home 03
Dark mode home 04

02 · Today and companion

Today 05
Companion panel · Do mode 06

03 · Recall and Repository

Recall · day view 07
Recall · session detail 08
To-do 09

04 · Remind and prayer

Reminders 10
New reminder dialog 11
Prayer times 12

05 · Rescue

Live incident room 13
Safety 14
Critical alert · lock screen 15

06 · Recite, music and news

Recite · devotional library 16
Music 17
News · morning briefing 18
Routines pending 19

07 · Connections, pendant and family

Connections pending 20
Pendant pending 21
Family circle pending 22

08 · Settings and privacy

Privacy and consent 23

09 · Onboarding and setup

Step 6 · Pair the pendant 24
Step 6 · Hardware test 25
Step 7 · Choose the AI Brain 26
Step 13 · SOS drill 27

10 · Wearer and mobile

Simple Mode · wearer's tablet 28
Phone · Today 29

11 · System states

Four standard states 30

Desktop home

WHAT IT SHOWS

- The calm desktop: the companion panel on the left, 17 app tiles over the lake-at-dusk wallpaper.
- Tabs, search, bell and the pendant chip sit in the top bar on every screen.
- Tile colours follow the six families: Care, Memory, Spirit, World, Home and device, Safety.

Dark mode home

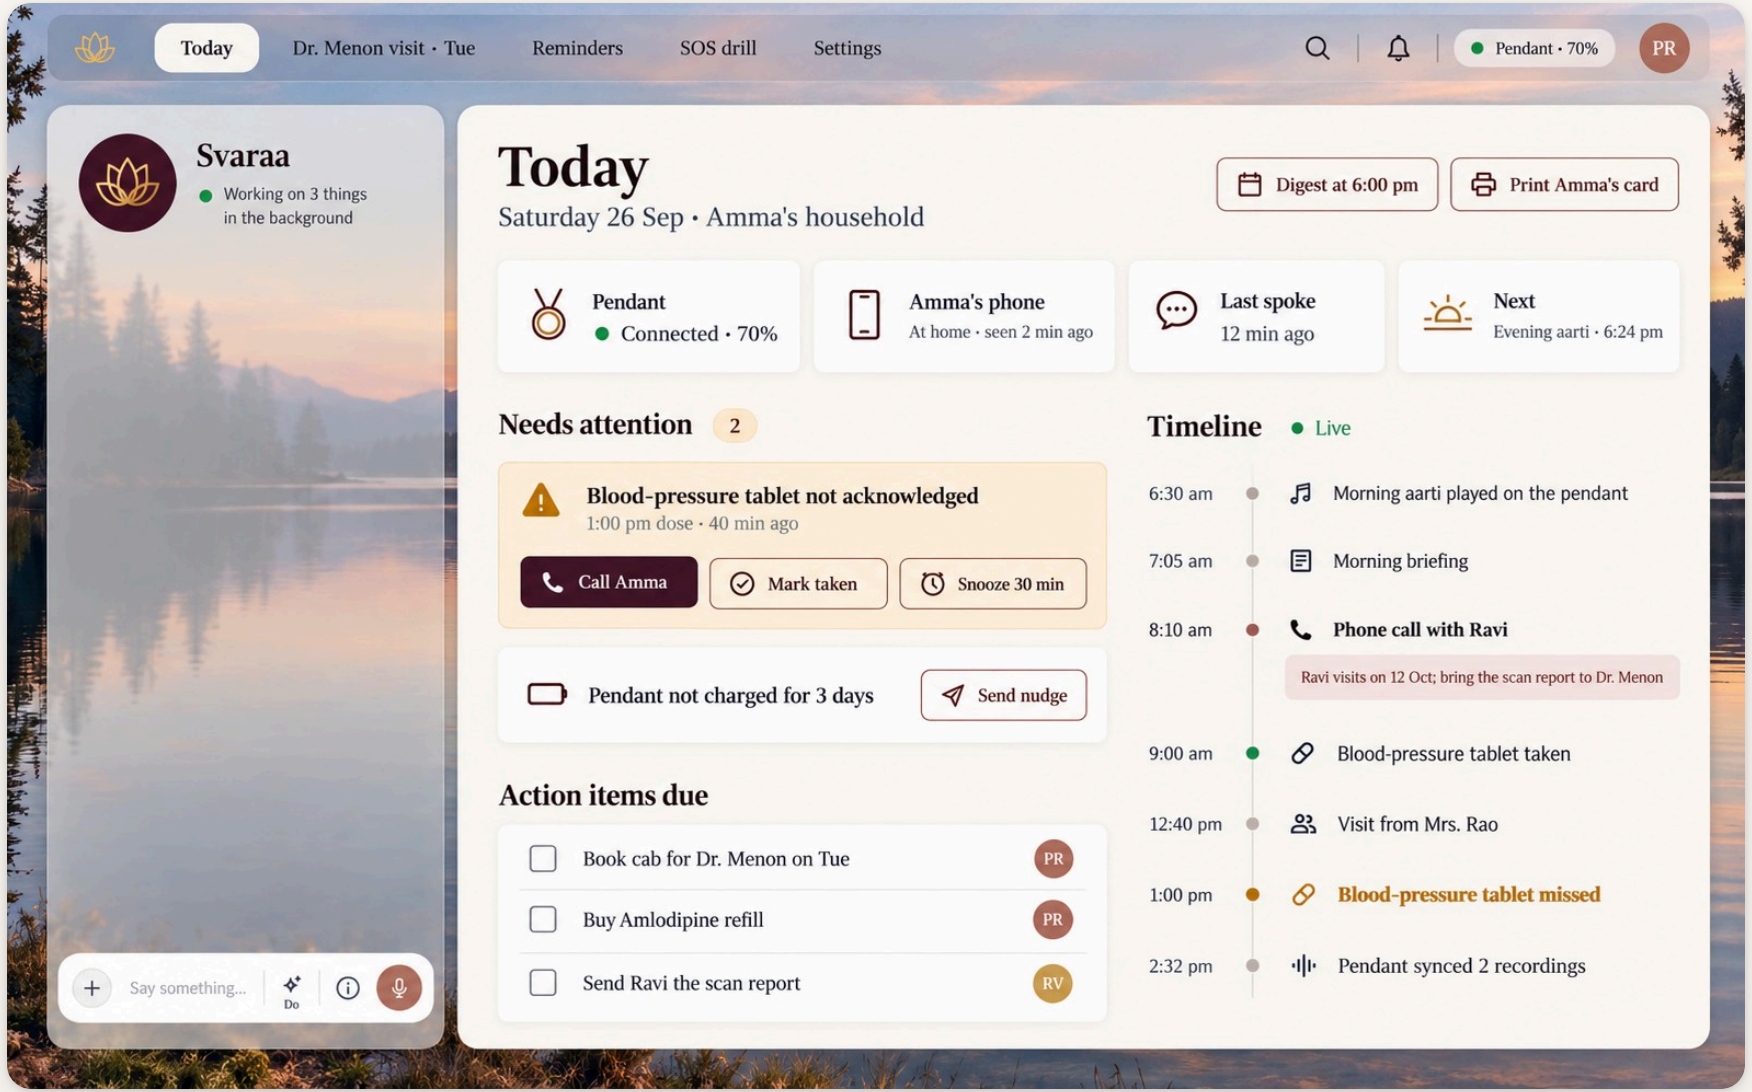

WHAT IT SHOWS

- Night aubergine canvas, never pure black; the lotus and Spirit tiles stay gold.
- Same layout and tiles as the light desktop, so nothing moves between themes.

CHECK BEFORE HANDOFF

The top bar is missing search and New chat; add them to match the light version.

Today

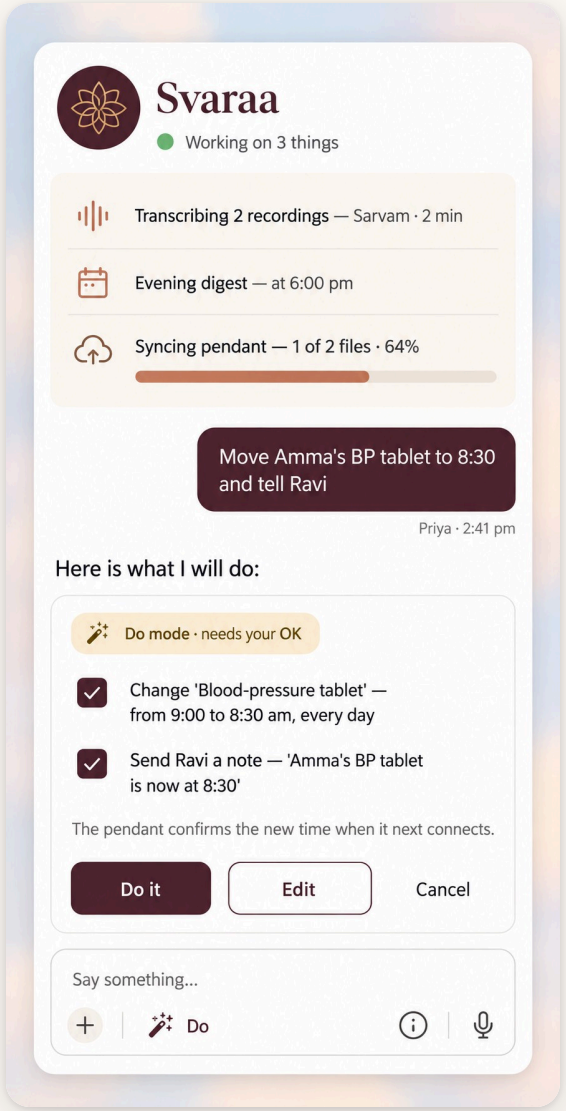

WHAT IT SHOWS

- Status strip: pendant, Amma's phone, last spoke, next.
- Needs attention cards, each with one primary action.
- Live timeline in pendant time, with the call summary inline.

CHECK BEFORE HANDOFF

Action-item owners differ from the spec: the Amlodipine refill is Ravi's and the scan report is Amma's.

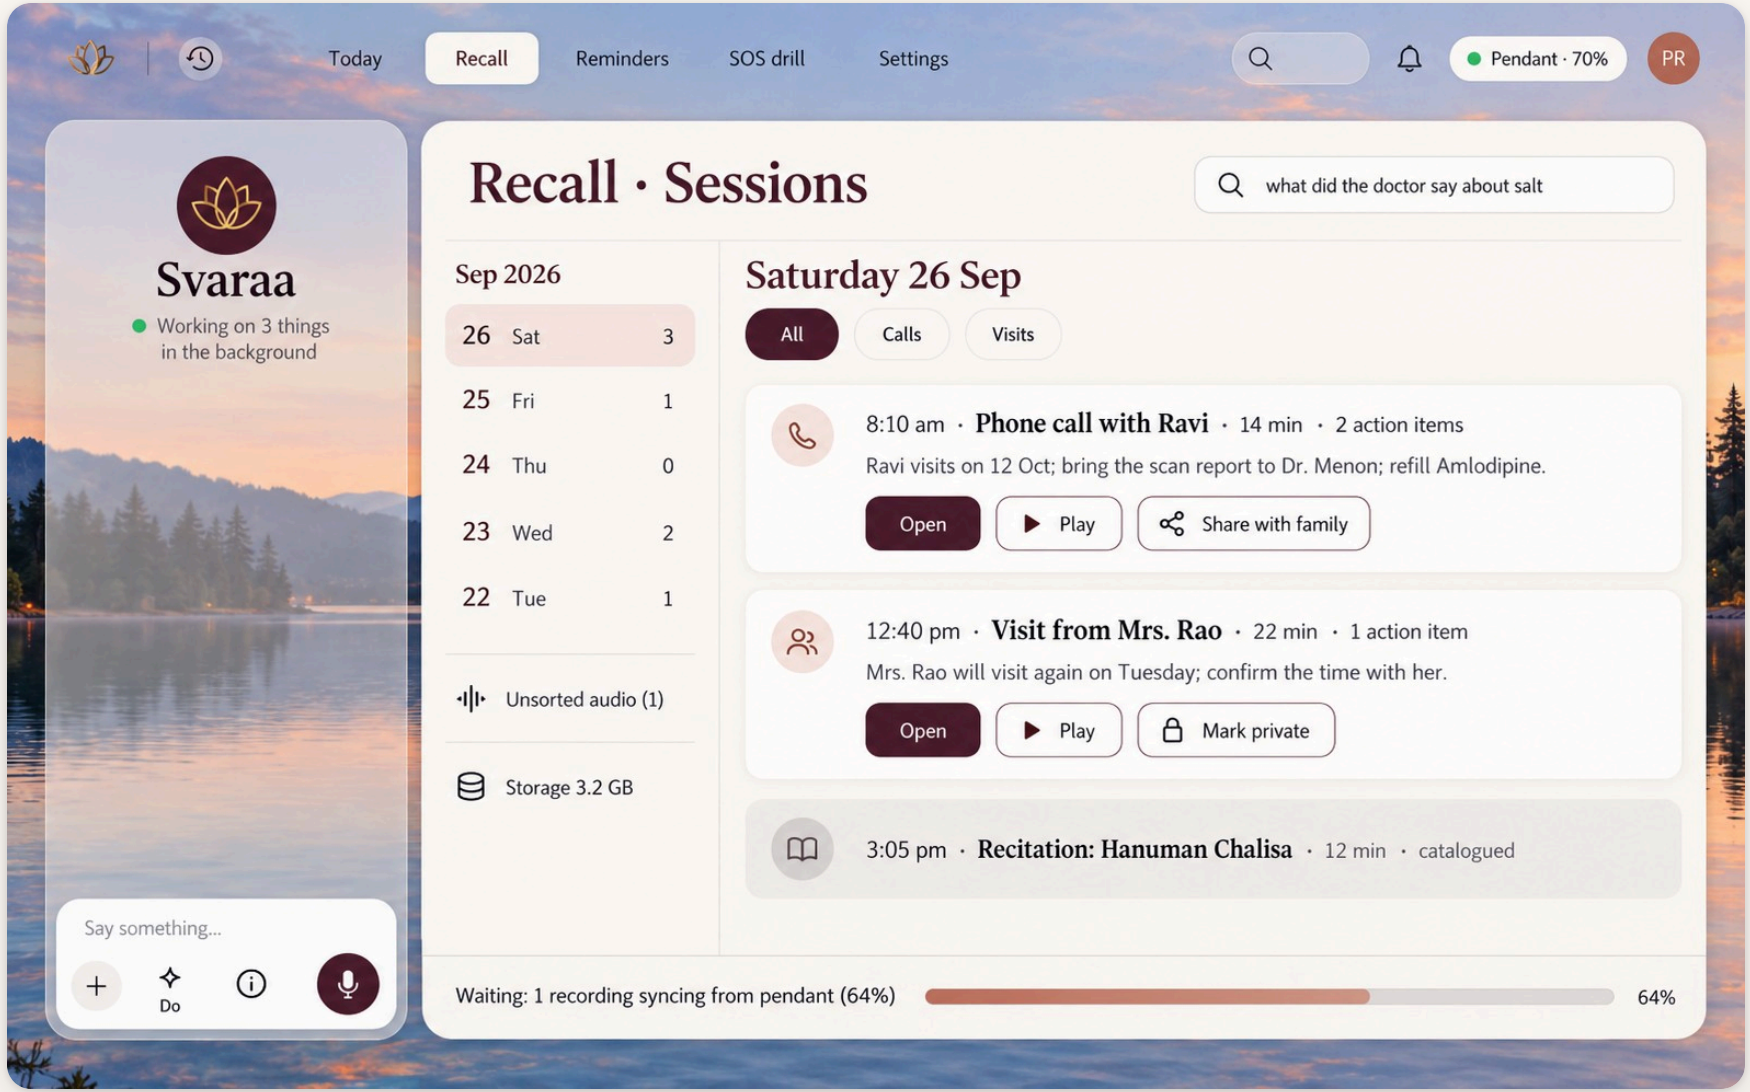

Companion panel · Do mode

WHAT IT SHOWS

- Background jobs with provider and progress at the top.
- Priya's request becomes a checklist of the exact changes.
- Nothing changes until she taps Do it; the pendant confirms the new time when it next connects.

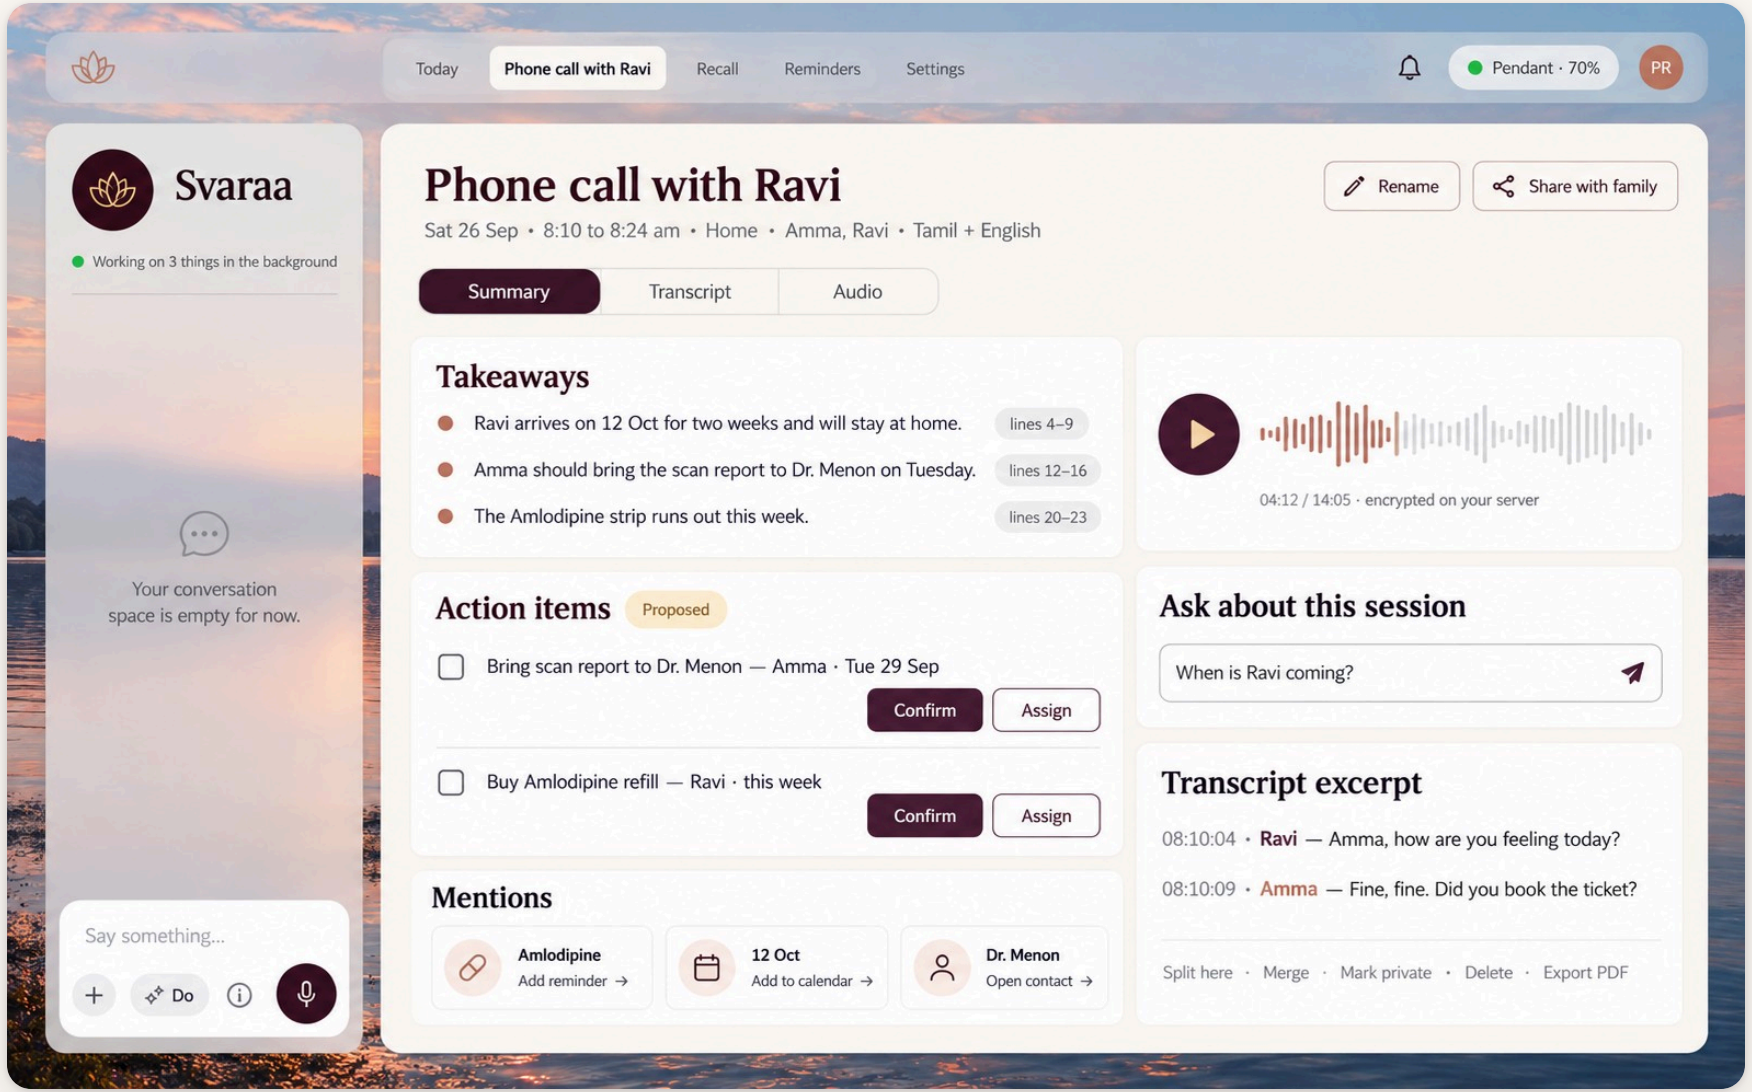

Recall · day view

WHAT IT SHOWS

- The day is cut into sessions automatically, each with a one-line summary.
- A recitation is catalogued, not summarised.
- Sync progress from the pendant runs along the bottom.

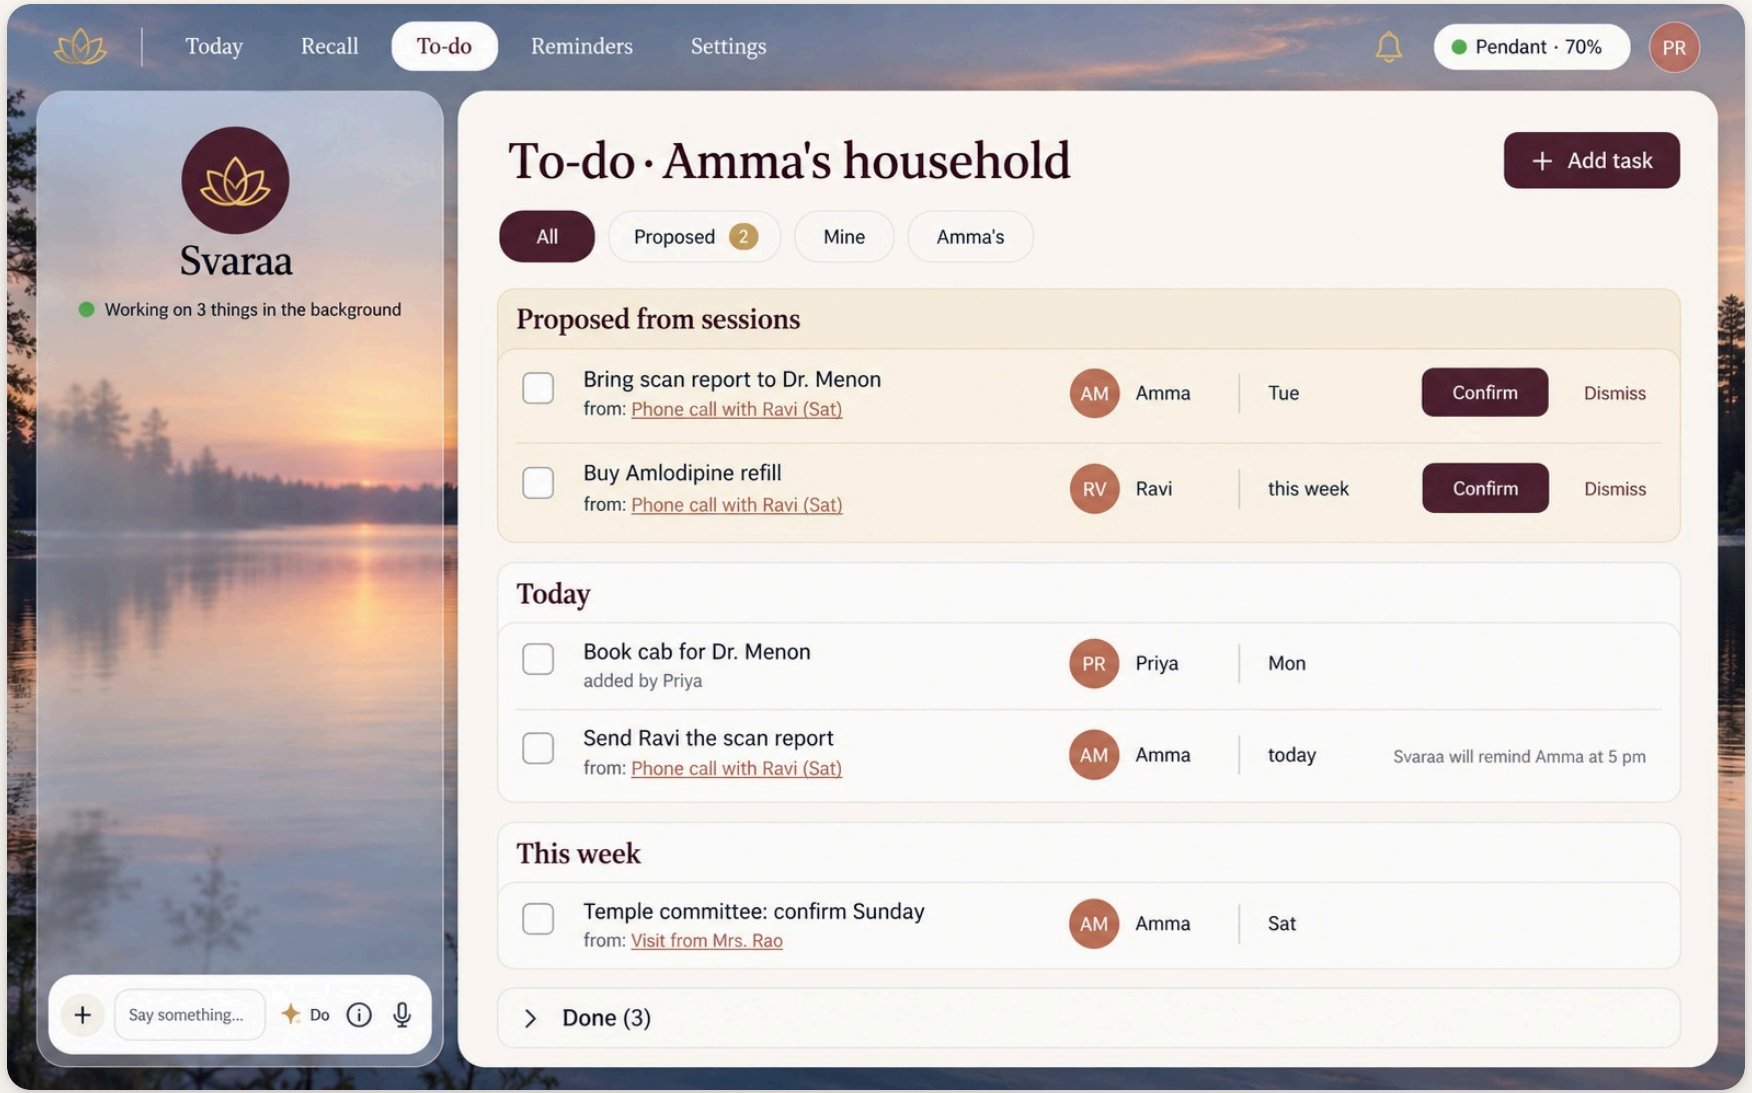

Recall · session detail

WHAT IT SHOWS

- Takeaways link to the transcript lines they came from.
- Action items arrive as Proposed and wait for Confirm.
- Mentions become one-tap reminders and calendar entries; audio stays encrypted on the household's server.

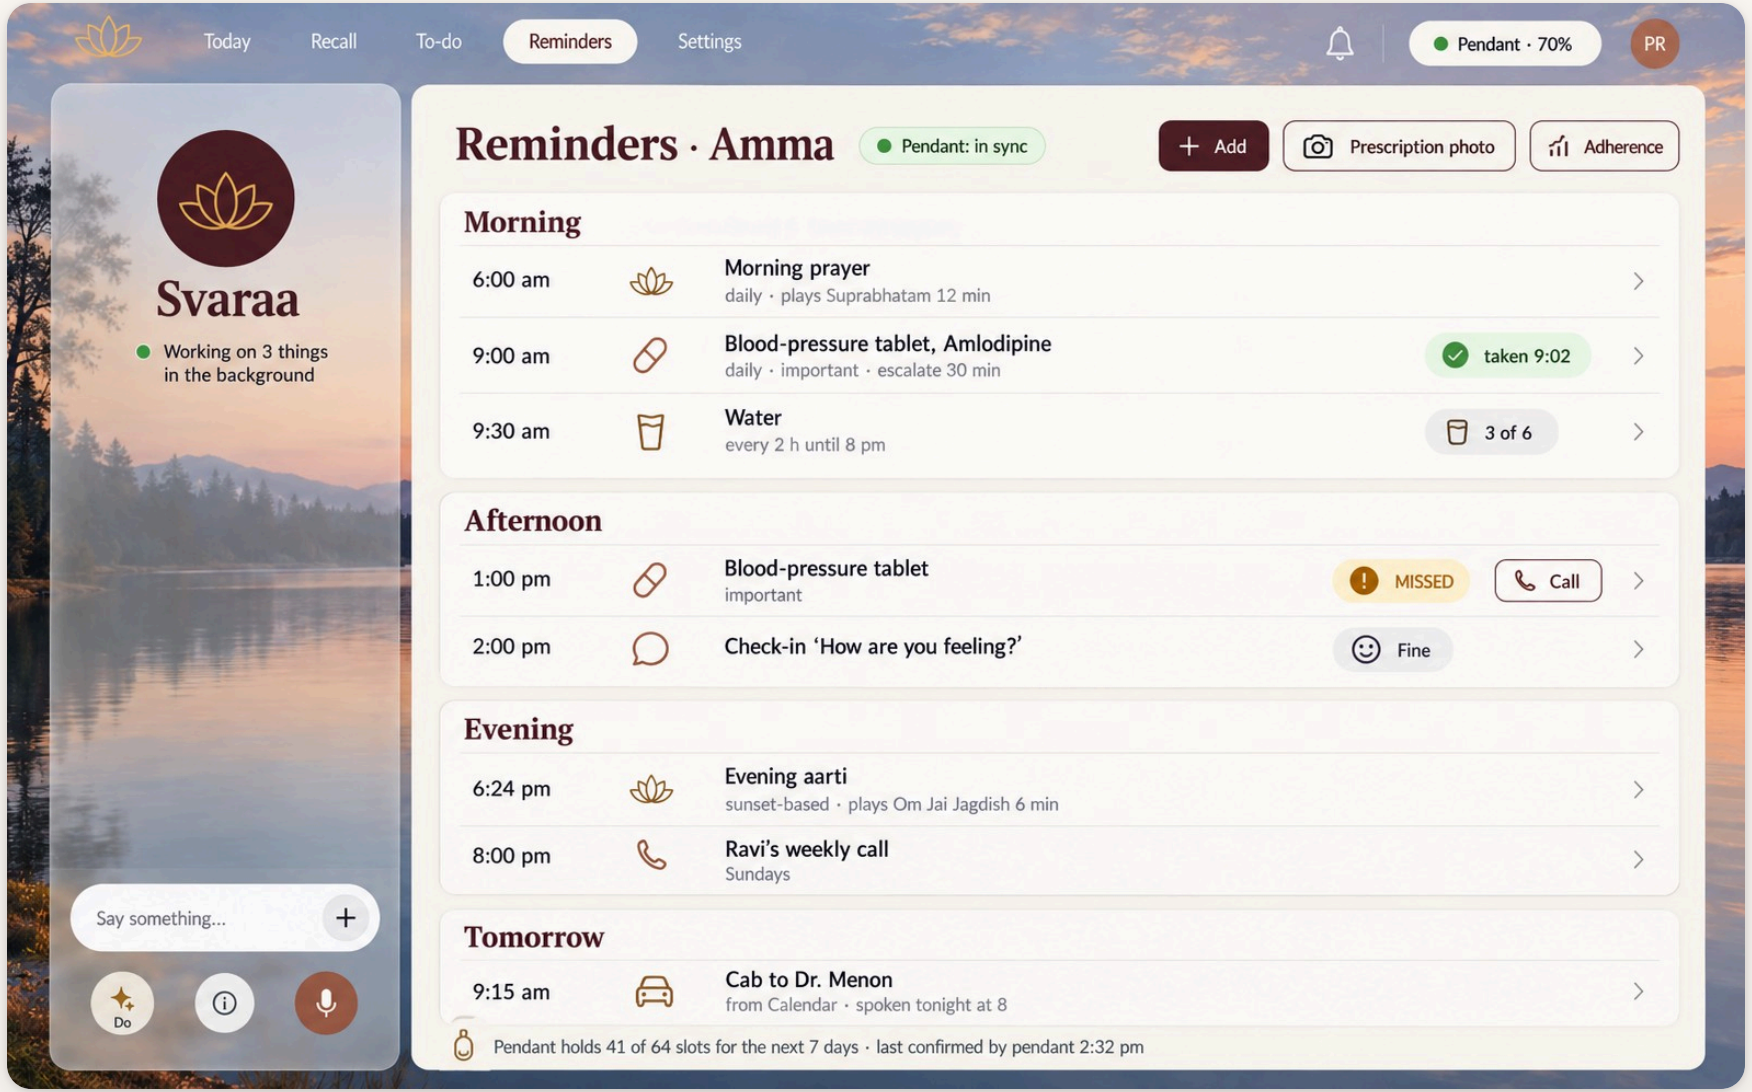

To-do

WHAT IT SHOWS

- Items proposed from sessions sit on top until someone confirms them.
- Every task links back to the session it came from.
- Tasks for Amma carry a spoken reminder.

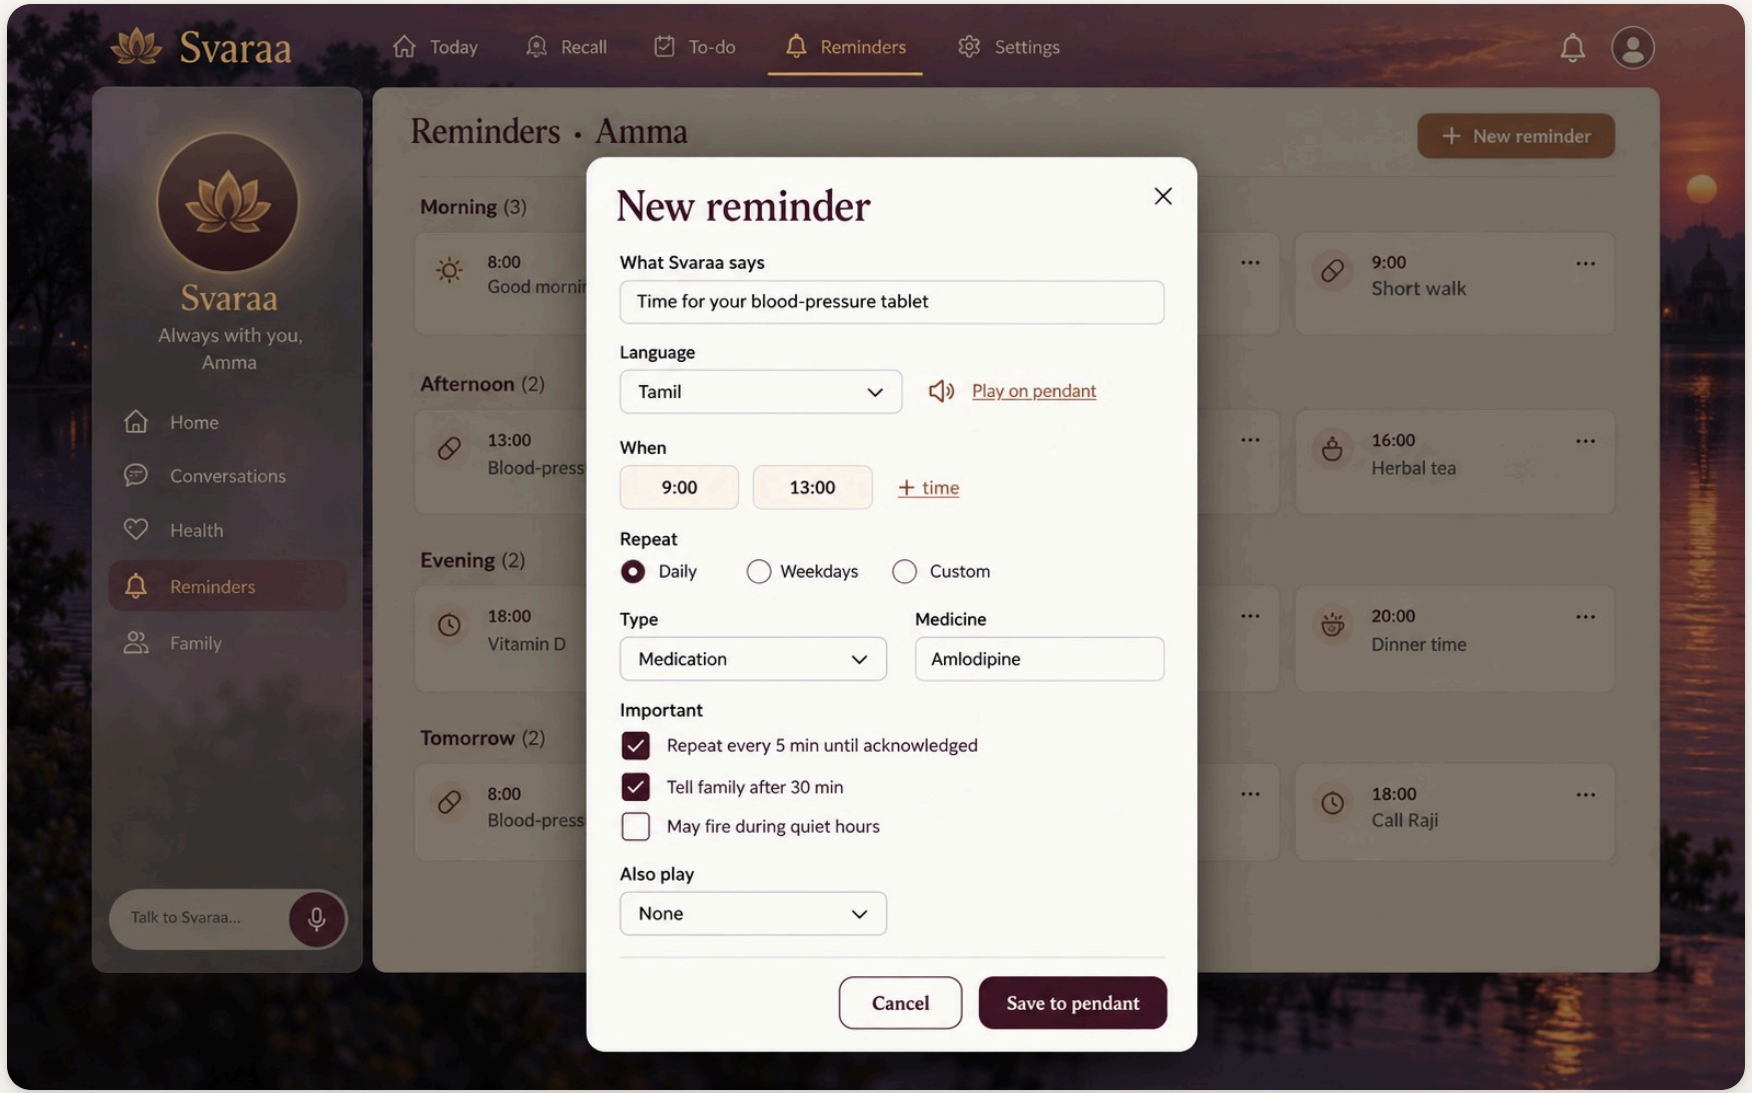

Reminders

WHAT IT SHOWS

- The day grouped from morning to tomorrow, with taken, missed and progress chips.
- A missed important dose offers a call straight away.
- The footer confirms what the pendant holds for the next seven days.

New reminder dialog

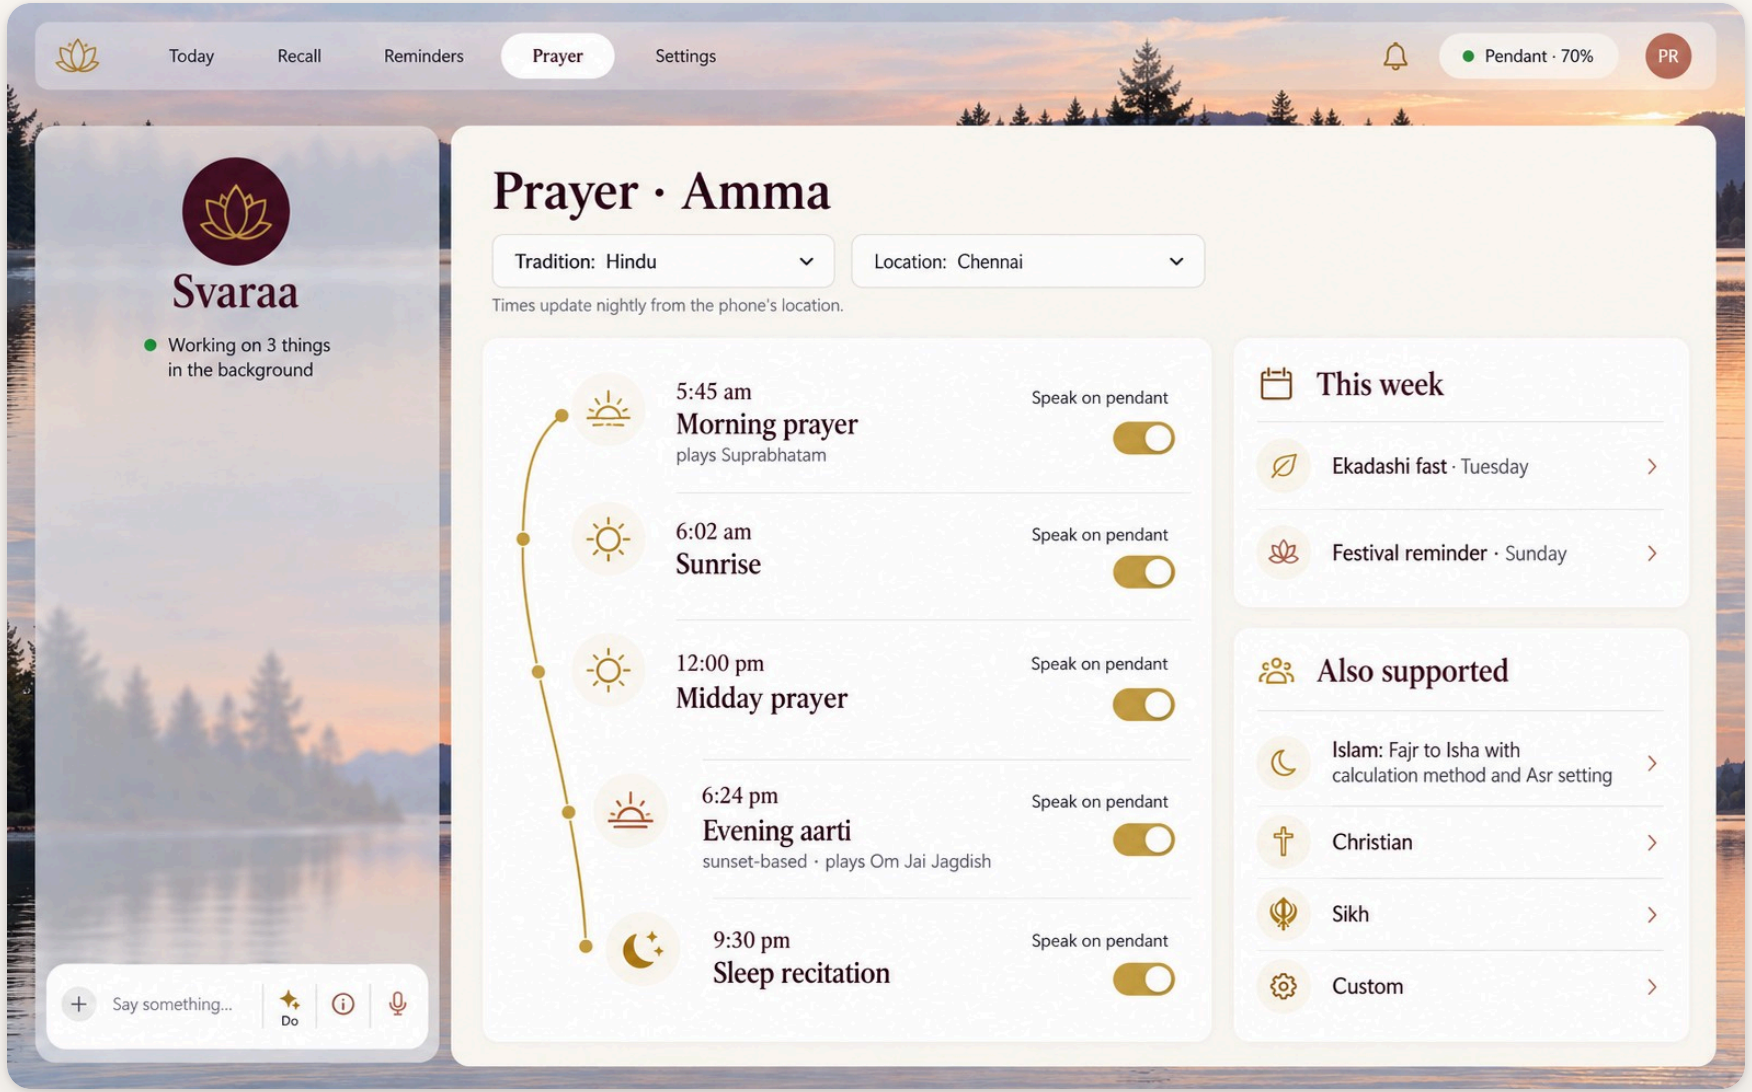

WHAT IT SHOWS

- What Svaraa says, in which language, with a preview on the pendant.
- Important reminders repeat every 5 min and tell the family after 30 min.
- Quiet hours are respected unless the reminder is allowed to speak.

CHECK BEFORE HANDOFF

The screen behind the dialog uses a sidebar and 24-hour times that are not in the spec; regenerate the background or crop to the dialog.

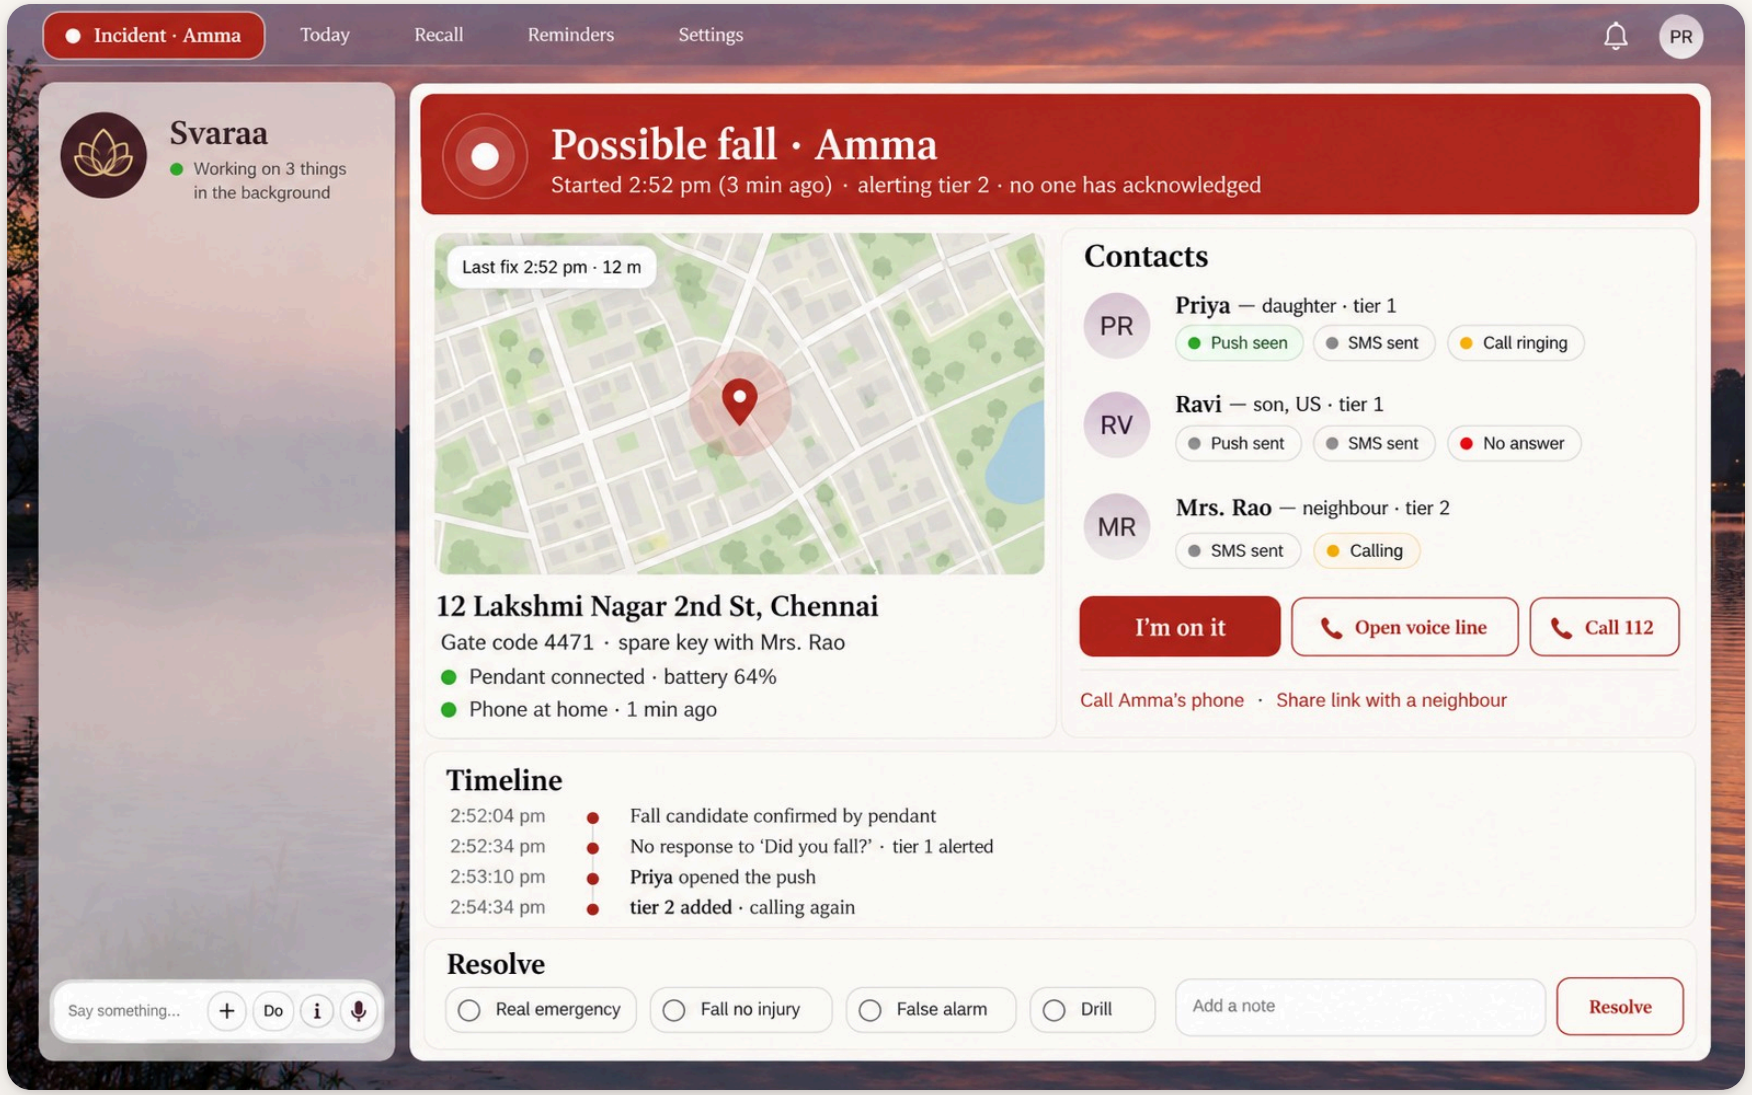

Prayer times

WHAT IT SHOWS

- Times computed nightly from the phone's location and the chosen tradition.
- Each moment can speak on the pendant and play a recitation.
- Islam, Christian, Sikh and custom schedules are also supported.

Live incident room

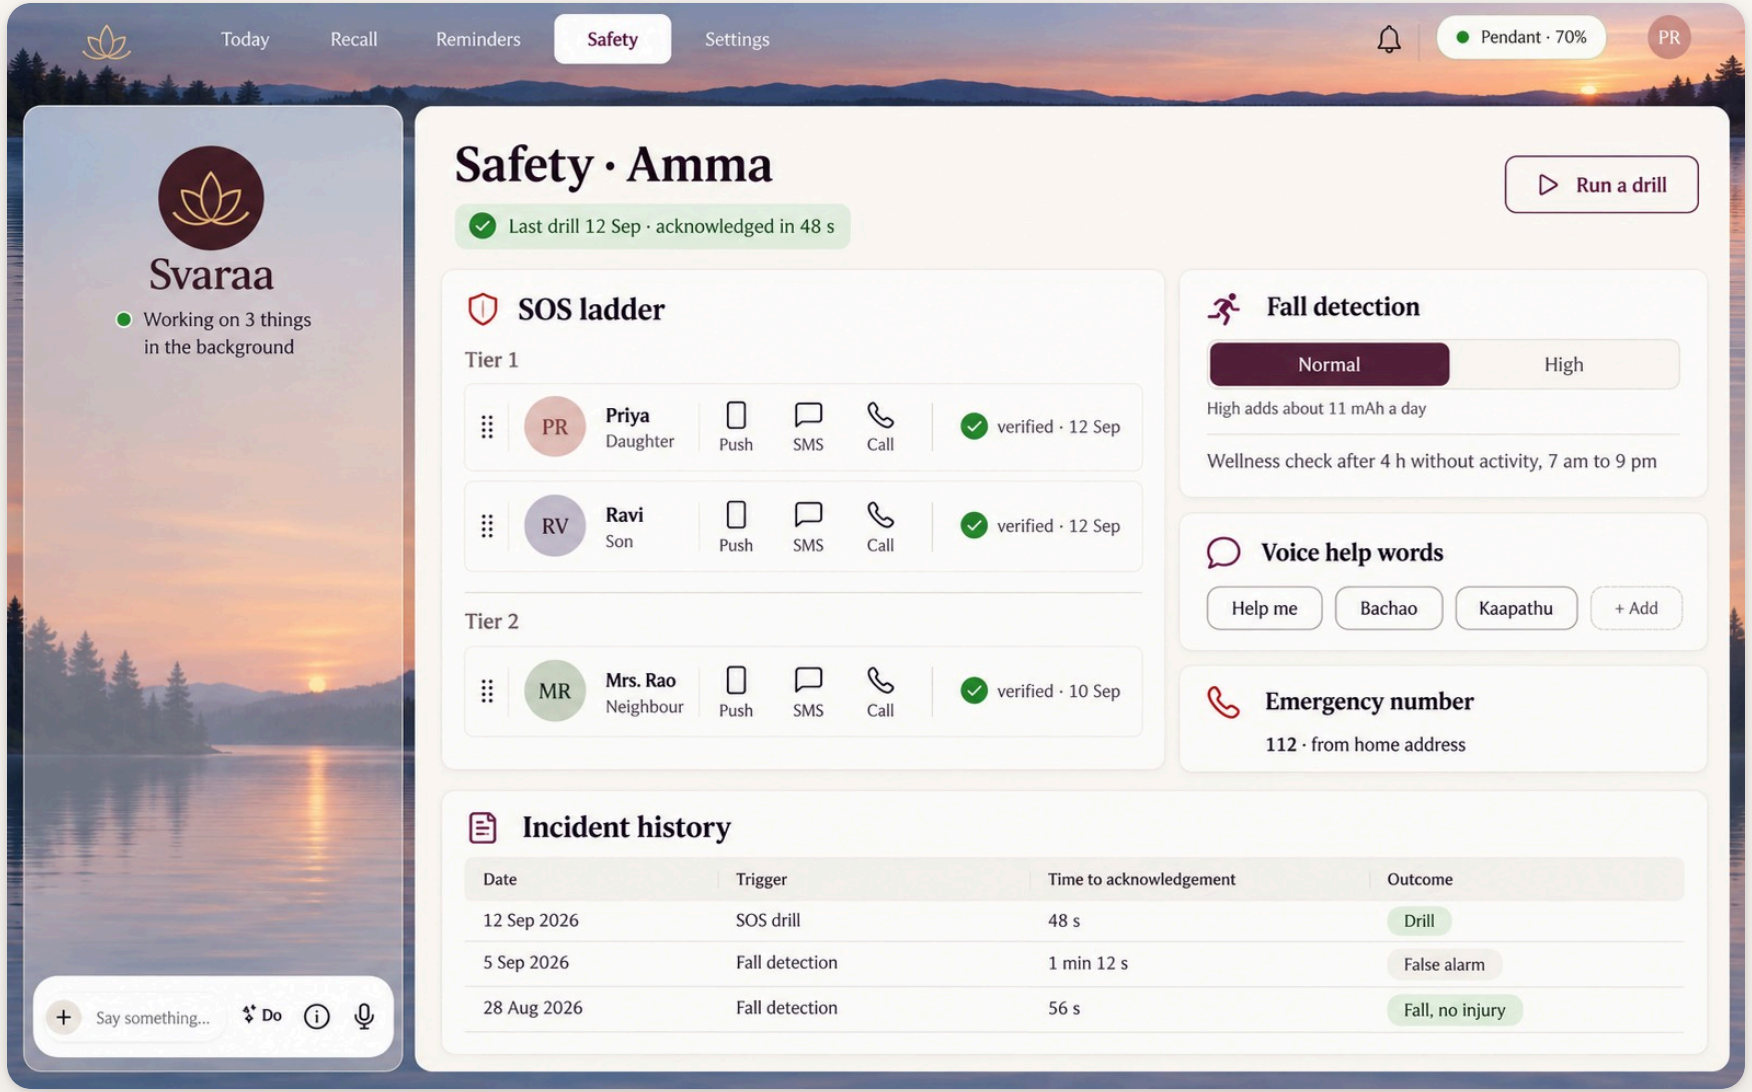

WHAT IT SHOWS

- Red banner, map with fix age, address, gate code and key holder.
- Live push, SMS and call state for every contact.
- One red I'm on it button; resolving needs an outcome.

CHECK BEFORE HANDOFF

The pendant chip is missing from the top bar; the spec keeps it visible on every screen.

Safety

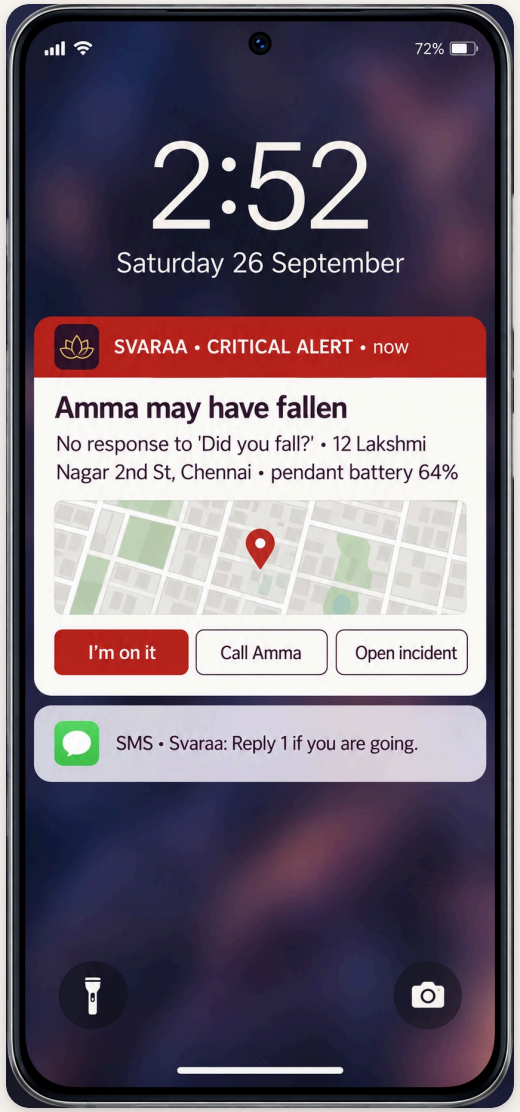

WHAT IT SHOWS

- The SOS ladder by tier, with verified contacts.
- Fall sensitivity, voice help words and the local emergency number.
- Incident history with time to acknowledgement and outcome.

CHECK BEFORE HANDOFF

Mrs. Rao is an emergency contact without an account, so she gets SMS and calls only, not push.

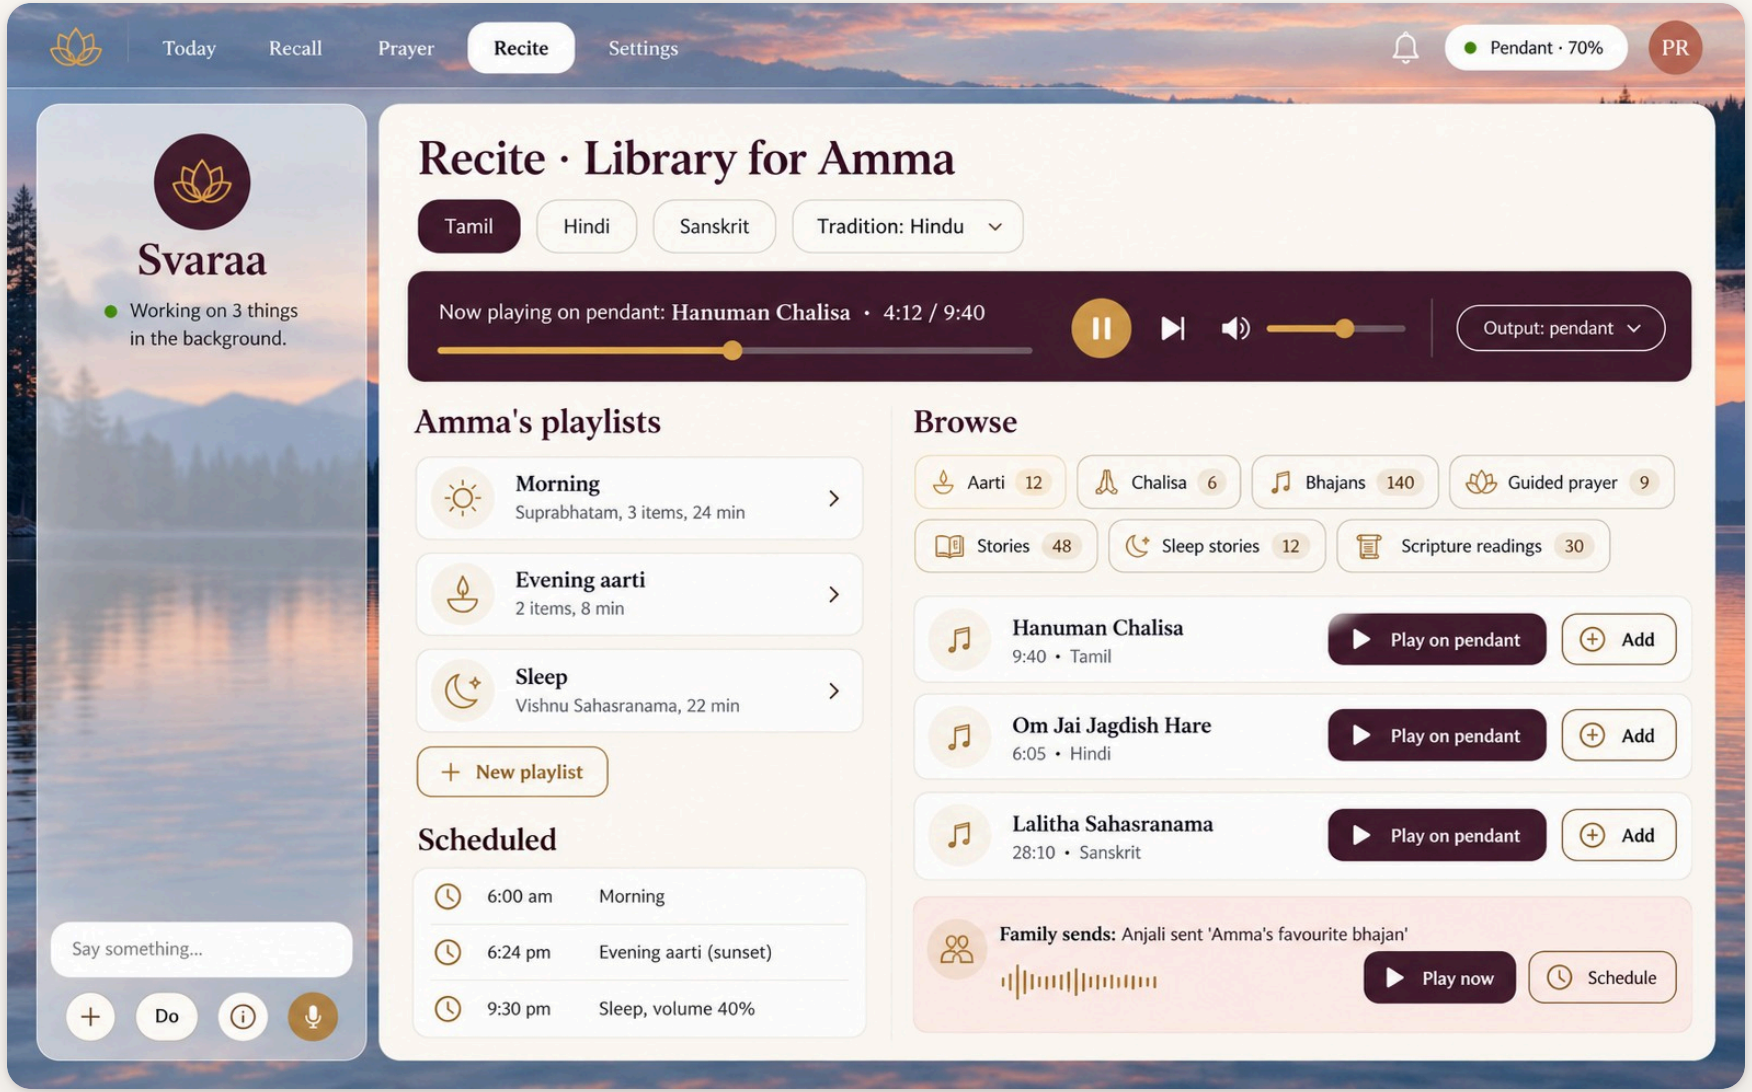

Critical alert · lock screen

WHAT IT SHOWS

- A critical alert that says who, what, where and the pendant battery.
- I'm on it acknowledges straight from the lock screen.
- The SMS fallback carries a reply keyword for contacts without the app.

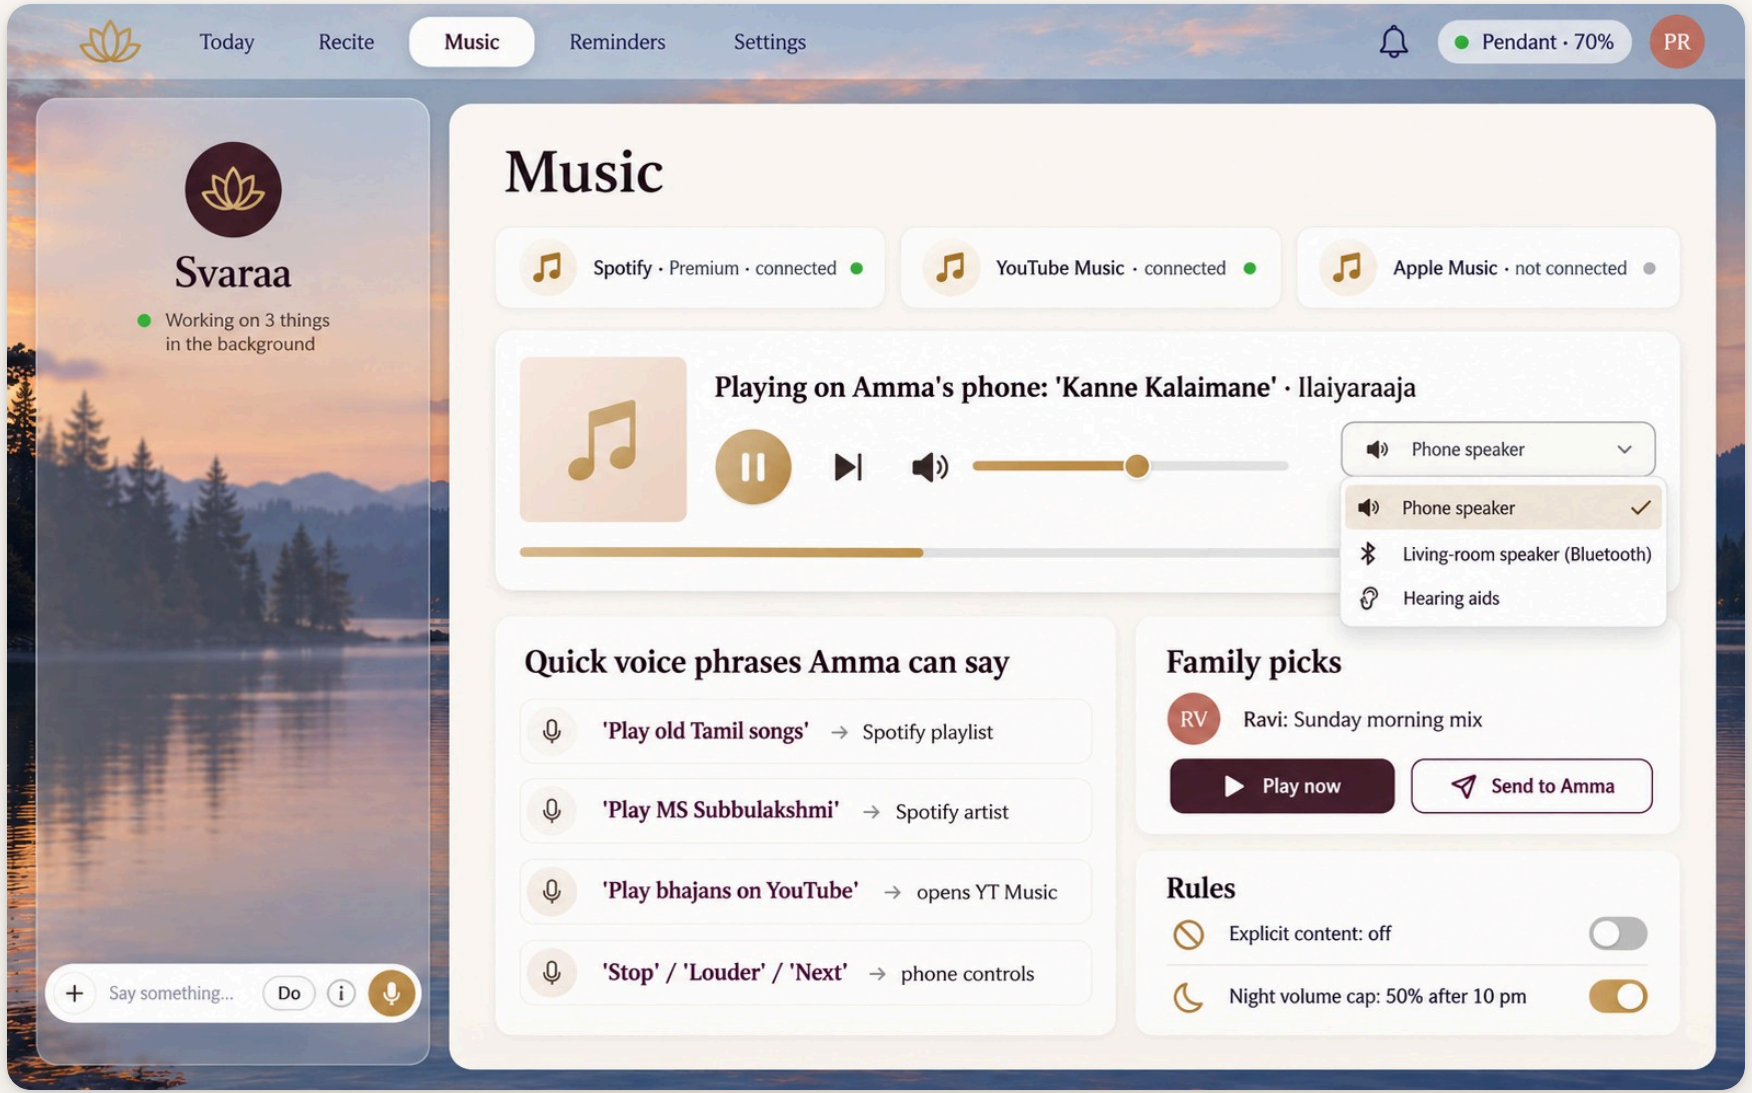

Recite · devotional library

WHAT IT SHOWS

- Svaraa's devotional library streams to the pendant speaker.
- Amma's playlists, the daily schedule and items the family sends.

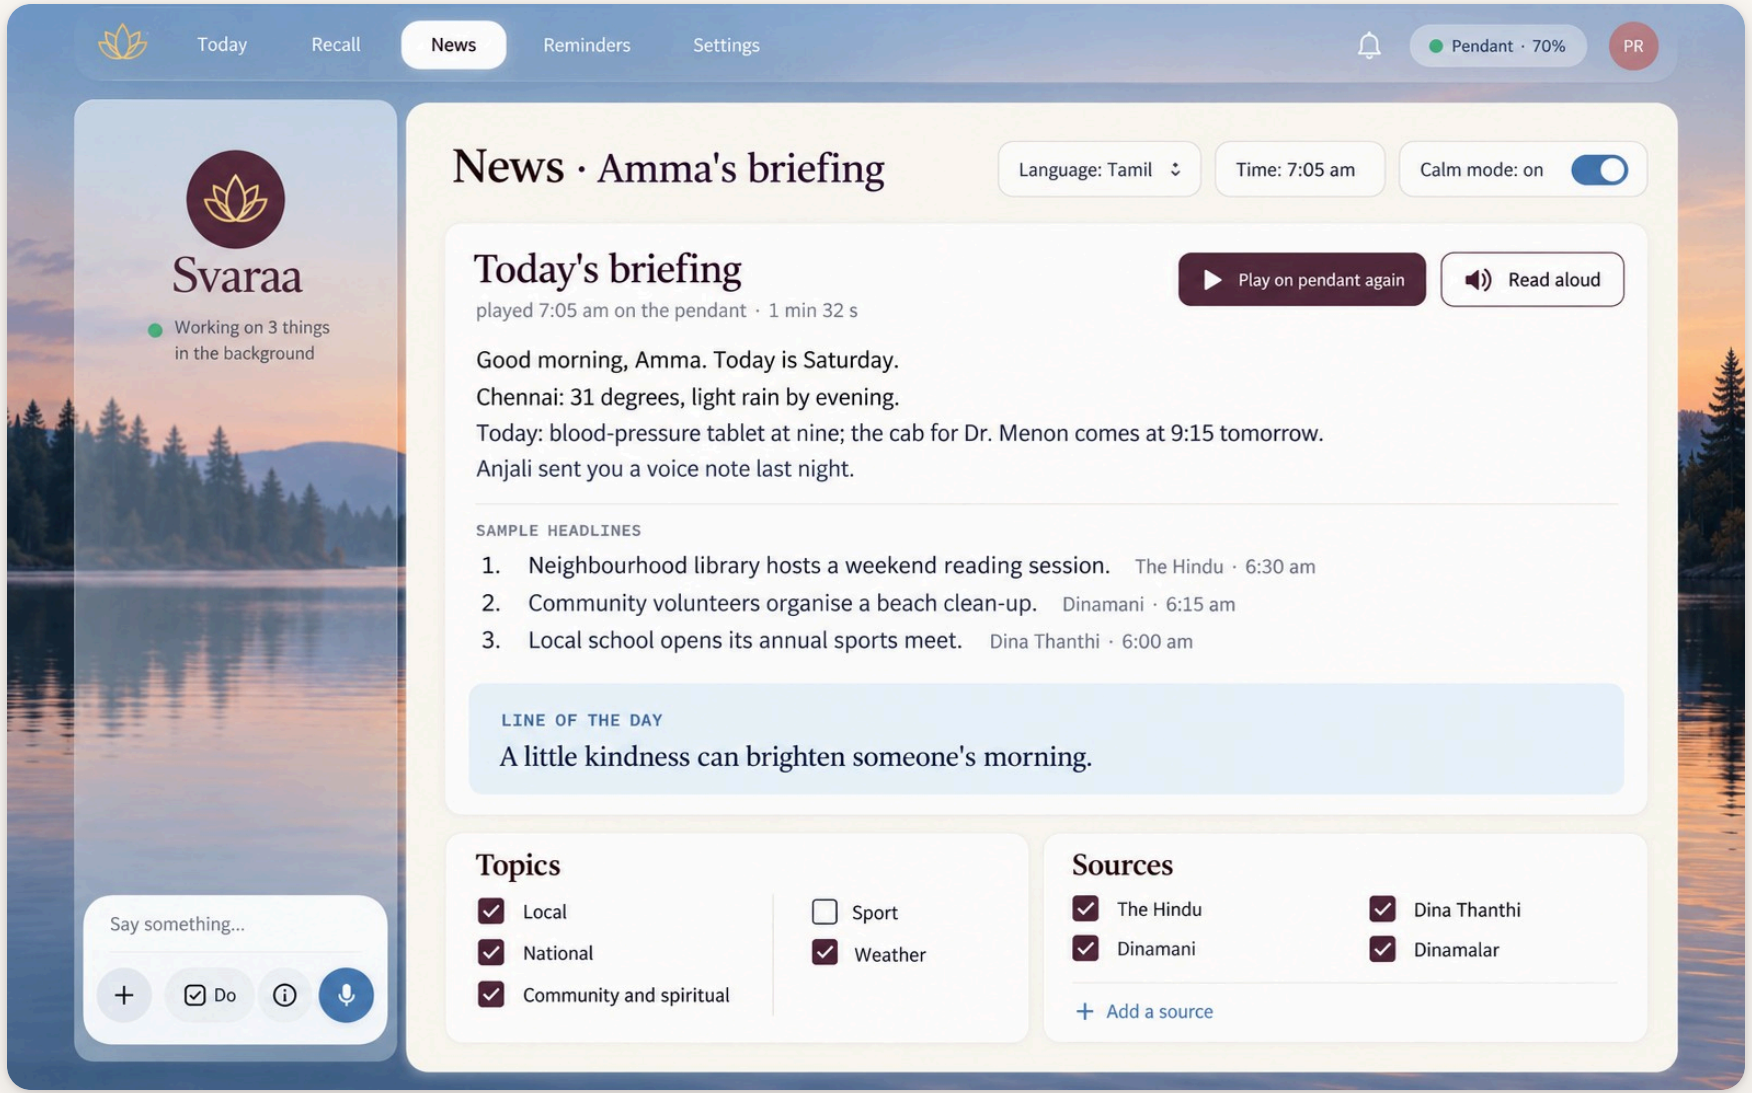

Music

WHAT IT SHOWS

- Streaming plays on the phone or a speaker; the pendant is the voice remote.
- Output can switch to a Bluetooth speaker or hearing aids.
- Voice phrases Amma can say, family picks and night rules.

News · morning briefing

WHAT IT SHOWS

- The 90-second morning briefing in Amma's language.
- Calm mode, topics and curated sources set by the family.

CHECK BEFORE HANDOFF

The mic button and the Calm mode toggle are blue; switch them to aubergine to match the palette.

Routines

Render pending

WHAT WE WANTED TO VISUALISE

A cream Routines window with a 24-hour ribbon marking each routine as a dot: briefing at 7:05 am, check-in at 2:00 pm, life story at 5:00 pm, digest at 6:00 pm. Below it, the list of routines with time, schedule and Edit, a soft aubergine card for quiet hours and a card for the wellness check.

WHERE IT IS SPECIFIED

PRD §13 · Routines app wireframe. The wireframe doc holds the full layout, logic and edge cases.

WHAT IT SHOWS

- Every routine in Amma's day on one 24-hour ribbon.
- Quiet hours 10:00 pm to 6:00 am; safety alerts always get through.
- Wellness check after 4 h without activity, 7:00 am to 9:00 pm.

Connections

Render pending

WHAT WE WANTED TO VISUALISE

One white row per integration (calendar, health, music, alerts, home hub, hearing aids), each with a category icon, the service name, a status chip and its actions. Healthy is green, needs attention is amber, and WhatsApp is greyed out as coming in V1.1.

WHERE IT IS SPECIFIED

PRD §14 · Connections app wireframe. The wireframe doc holds the full layout, logic and edge cases.

WHAT IT SHOWS

- Every integration with a plain state and what it is used for.
- Needs-attention states come with a one-tap Reconnect.
- WhatsApp appears as coming in V1.1.

Pendant

Render pending

WHAT WE WANTED TO VISUALISE

A hero strip with the rose-gold and aubergine pendant, and beside it battery with days left, last charge, connection, microphones, recording, storage and firmware, plus a 7-day battery line. Below, cards for gestures and fall detection, then a row of care actions: restart guide, dry-the-port tip, replace, mark as lost, factory reset.

WHERE IT IS SPECIFIED

PRD §15 · Pendant app wireframe. The wireframe doc holds the full layout, logic and edge cases.

WHAT IT SHOWS

- Battery, charging, storage, firmware and connection in one strip.
- Gesture toggles, volume, haptics and fall sensitivity.
- Care actions from restart guide to factory reset.

Family circle

Render pending

WHAT WE WANTED TO VISUALISE

A table of Amma's circle: member with initial avatar, role pill (Owner, Caregiver, Viewer, Wearer, Emergency, Contact), SOS tier, alert channels, last active and actions. Below, a pending invite with Resend and Revoke, and the toggle for the presence line Amma hears.

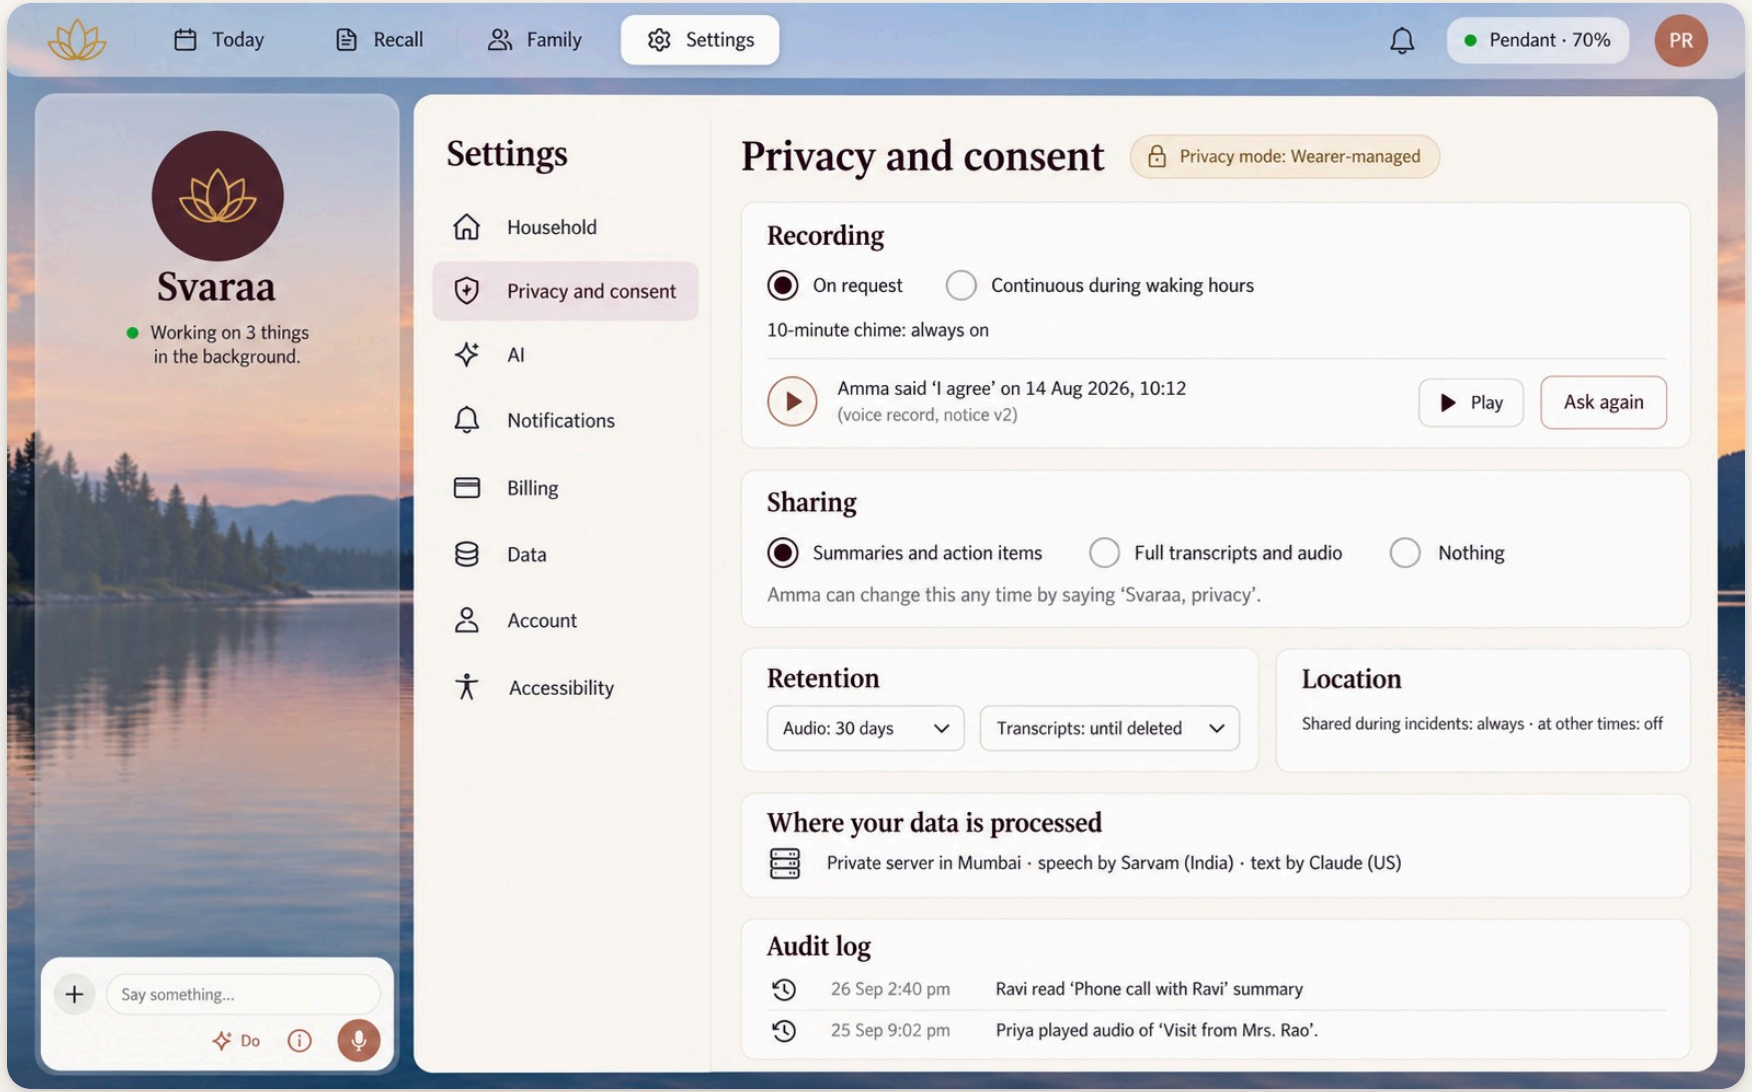

WHERE IT IS SPECIFIED

PRD §16 · Family app wireframe. The wireframe doc holds the full layout, logic and edge cases.

WHAT IT SHOWS

- Every member with role, SOS tier, alert channels and last active.
- Pending invites with Resend and Revoke.
- The presence line Amma can hear: "Priya checked on you today".

Privacy and consent

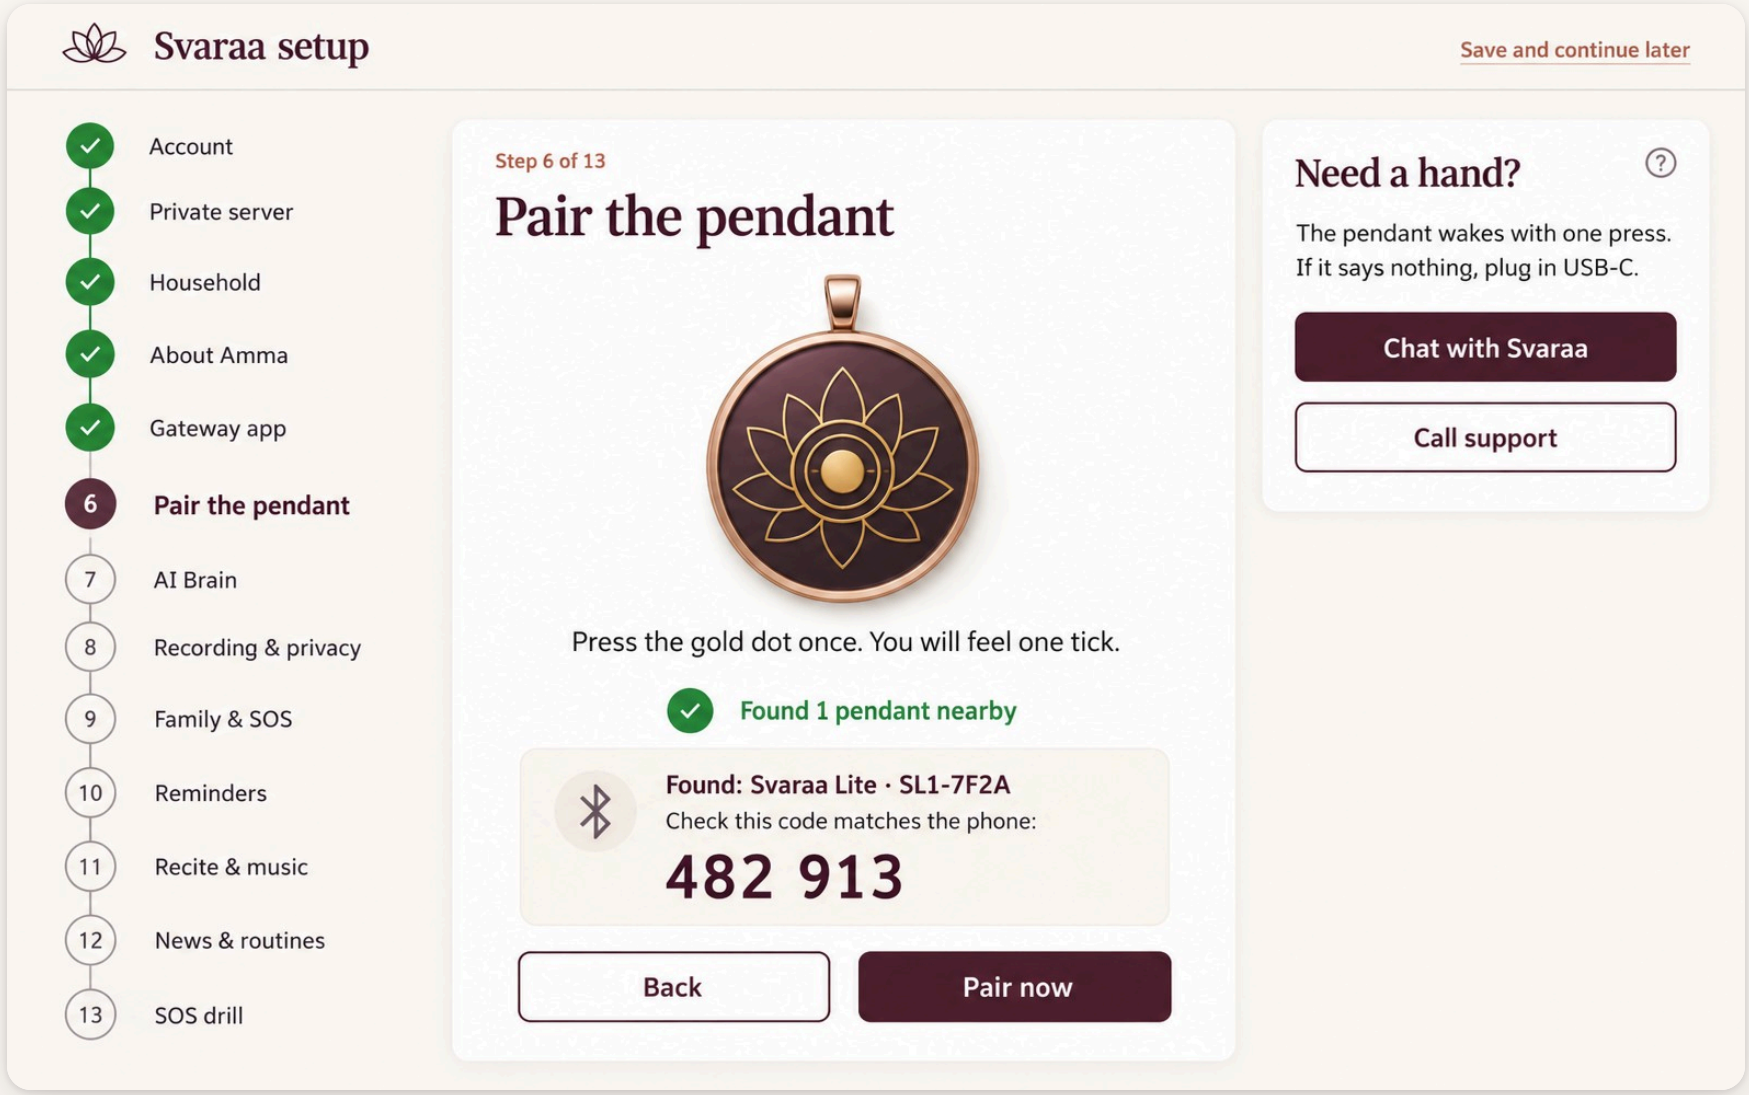

WHAT IT SHOWS

- Recording mode with Amma's voice consent, playable and re-askable.
- A sharing level Amma can change by voice.
- Retention, location, where data is processed, and the audit log.

CHECK BEFORE HANDOFF

The processing line says text by Claude, but the AI Brain screen chooses Sarvam; make both show the same provider.

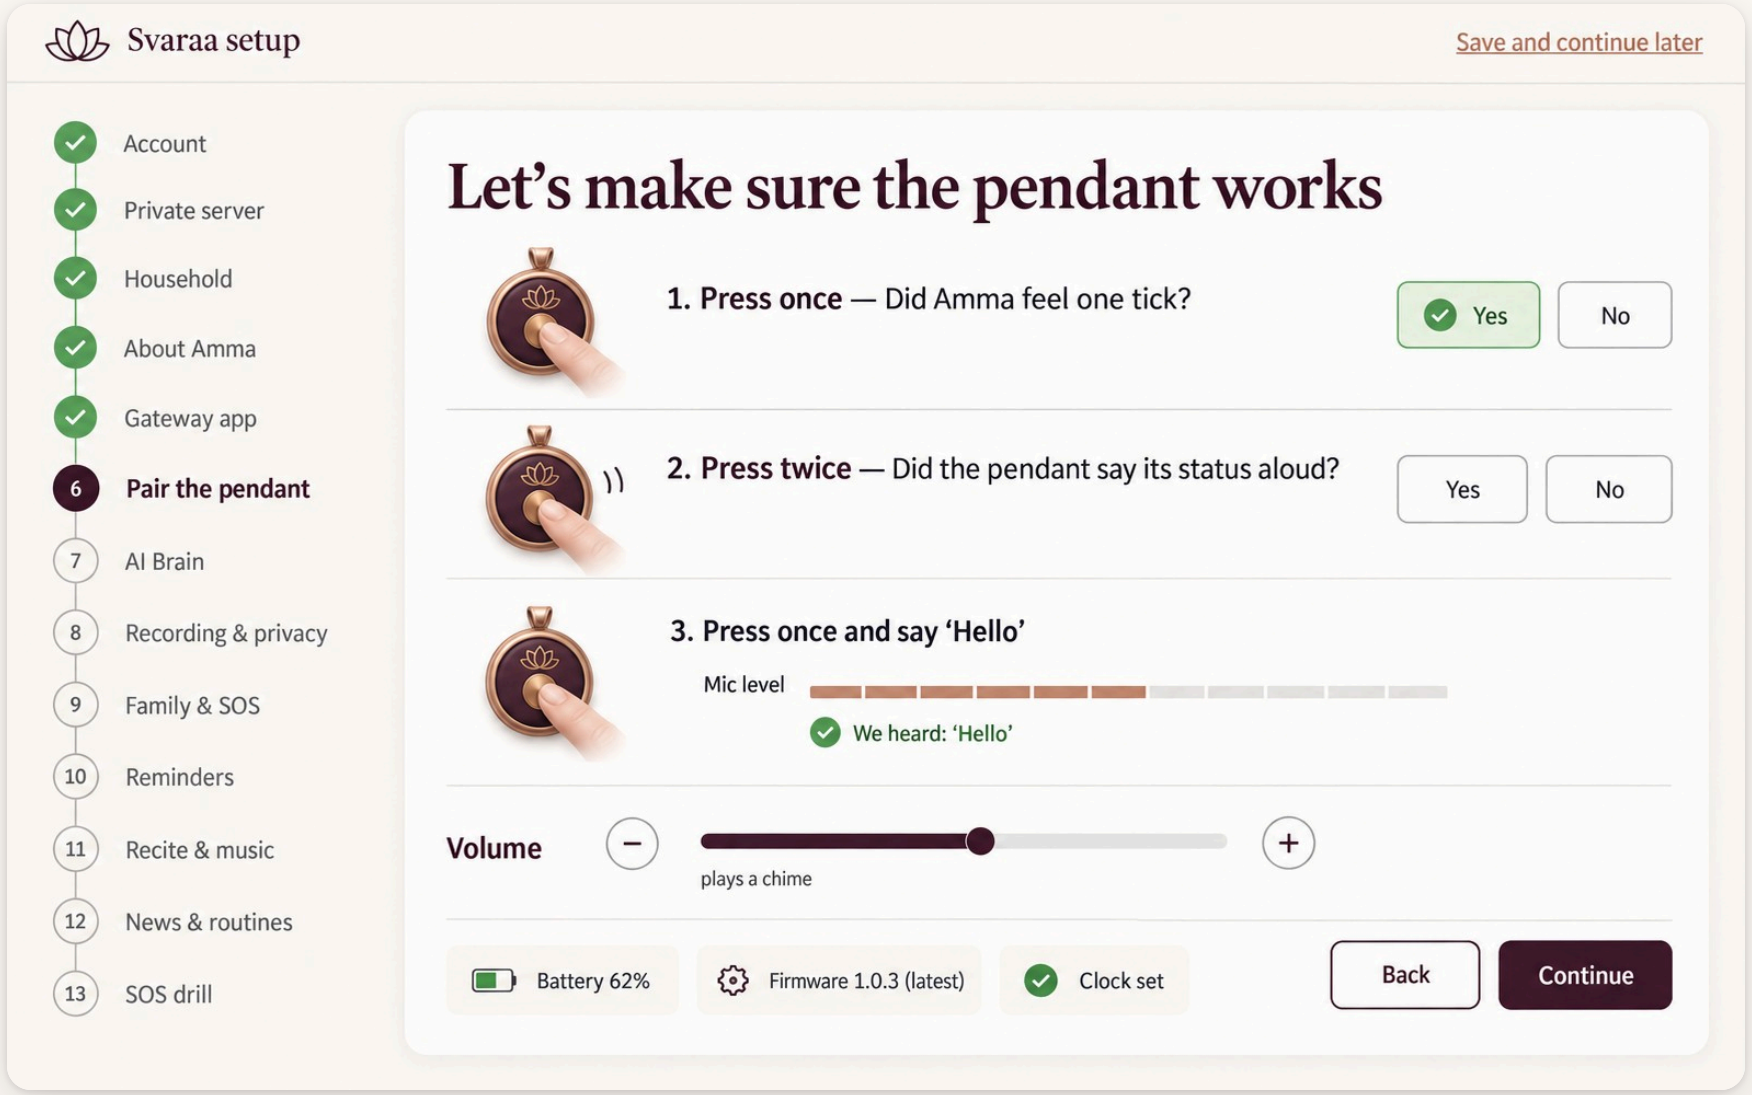

Step 6 · Pair the pendant

WHAT IT SHOWS

- The step rail with five steps done and step 6 active.
- One instruction, the pendant illustration and a found-pendant confirmation.
- A numeric code to compare before pairing; help beside the step.

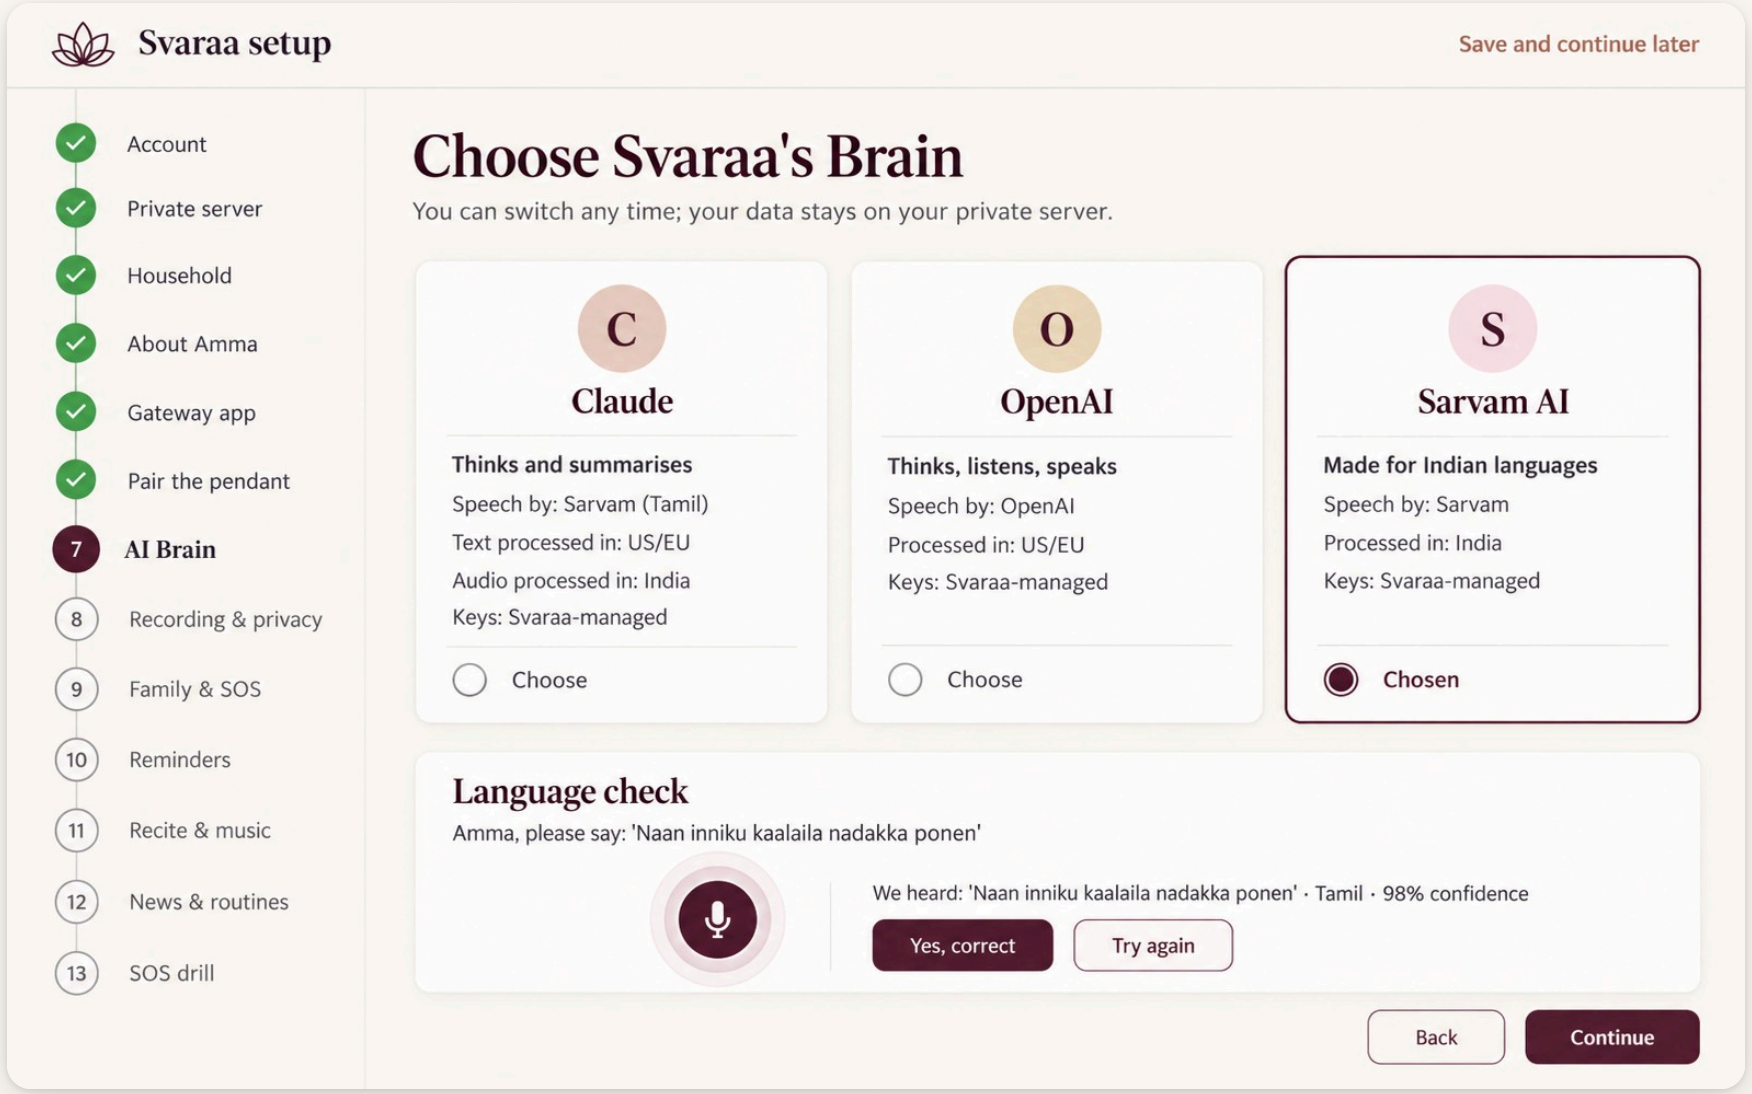

Step 6 · Hardware test

WHAT IT SHOWS

- Three checks: the tick is felt, the status is spoken, the mic hears “Hello”.
- Volume with a test chime.
- Battery, firmware and clock confirmed before continuing.

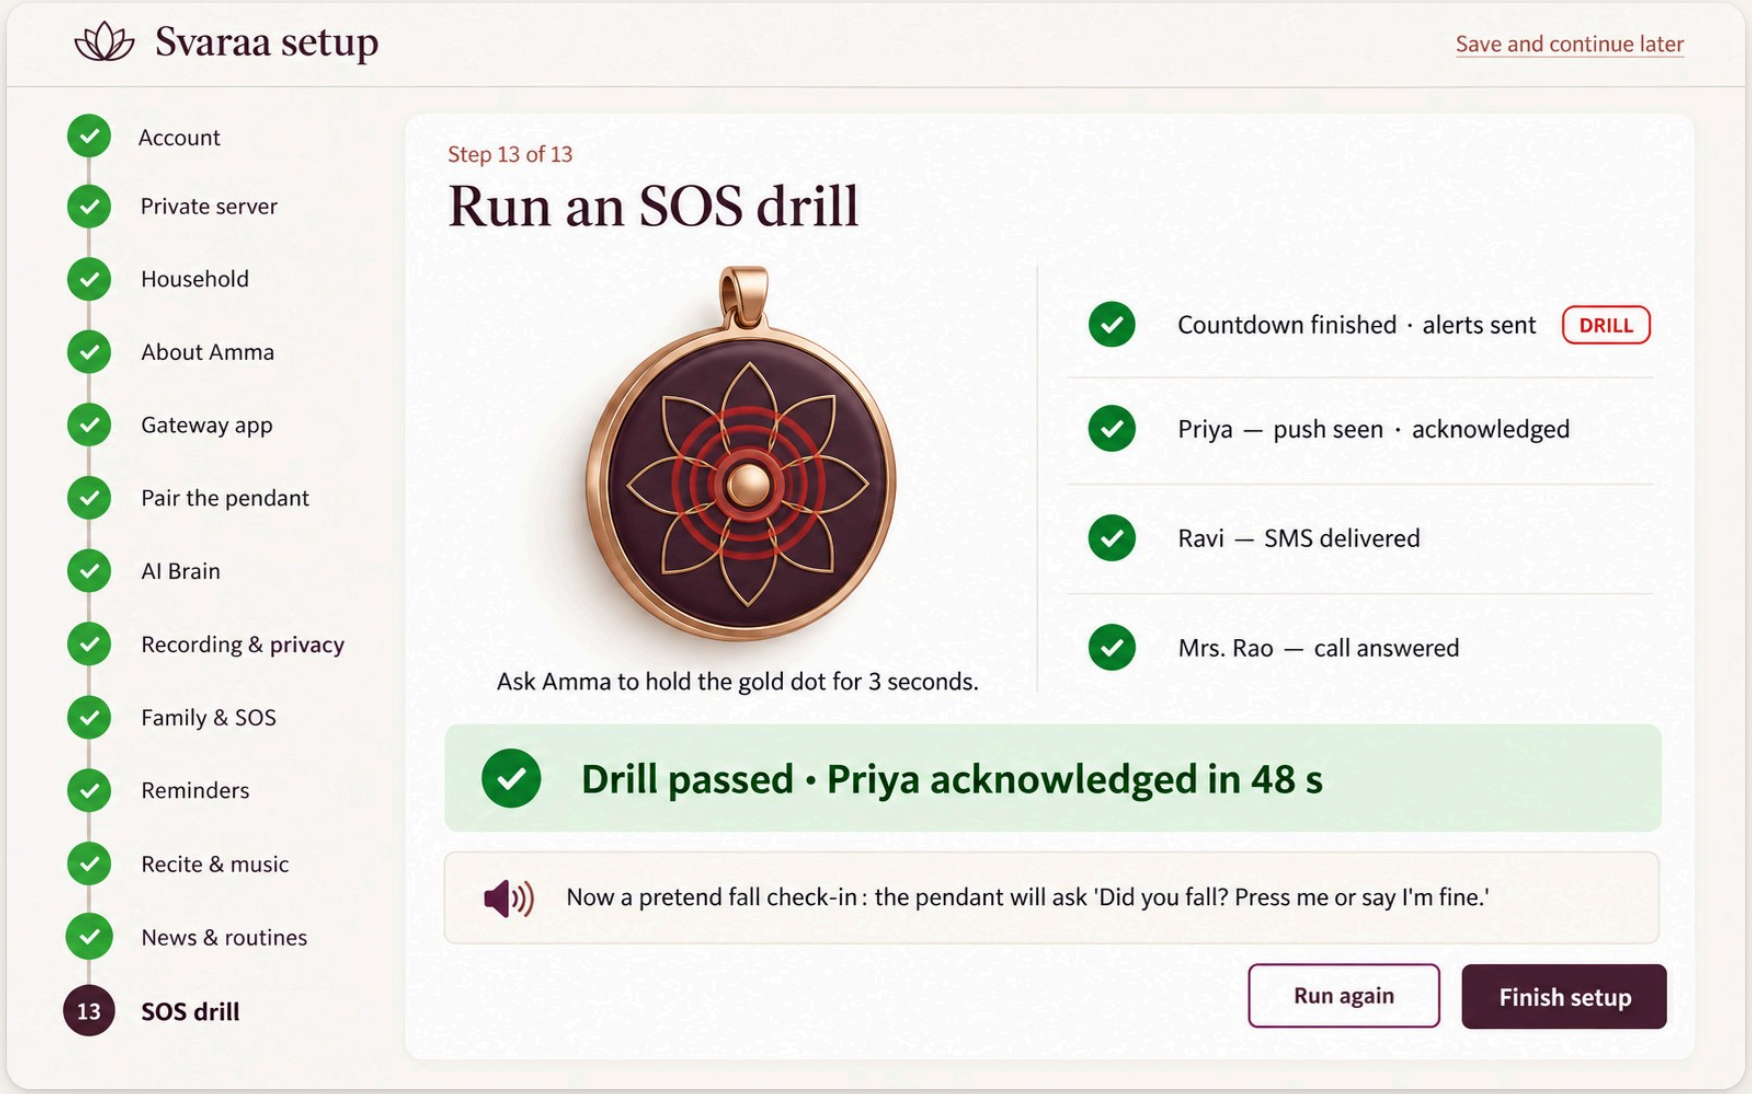

Step 7 · Choose the AI Brain

WHAT IT SHOWS

- Claude, OpenAI and Sarvam AI, each with where text and audio are processed.
- Sarvam is chosen; keys are Svaraa-managed.
- A live language check Amma must confirm before continuing.

Step 13 · SOS drill

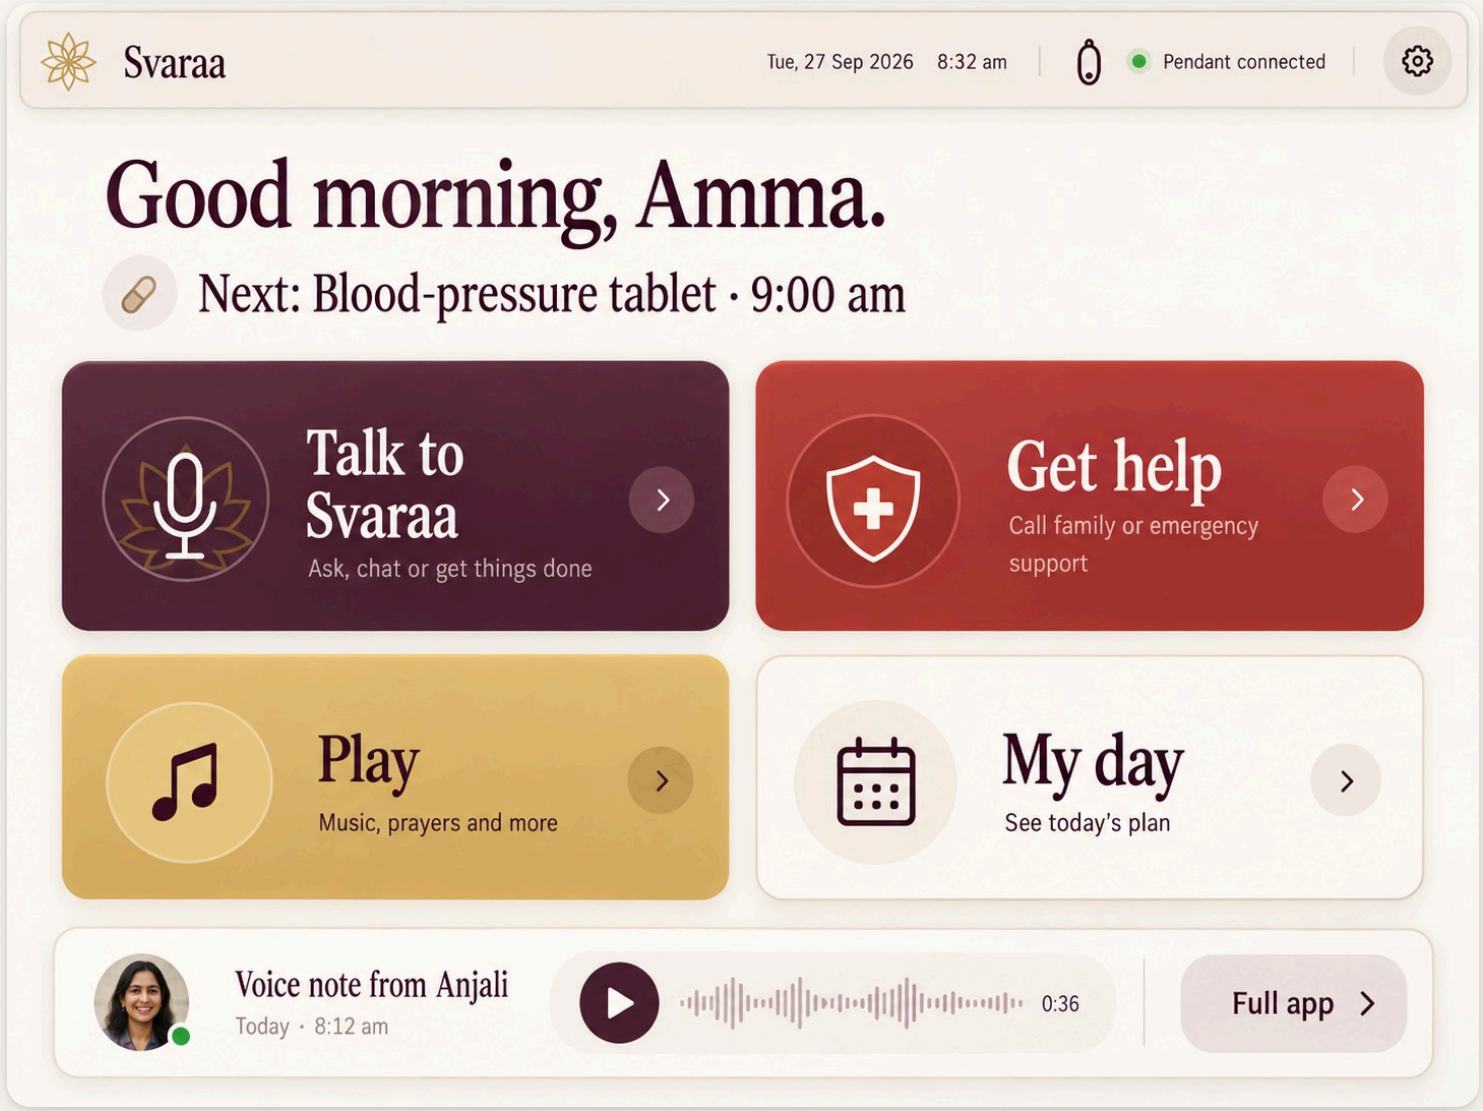

WHAT IT SHOWS

- Amma holds the gold dot; alerts go out marked DRILL.
- Each contact's result arrives live; the drill passes on the first acknowledgement.
- A pretend fall check-in follows before setup finishes.

CHECK BEFORE HANDOFF

The red rings sit on the pendant face and could read as a light; Lite has none, so draw them around the pendant instead.

Simple Mode · wearer's tablet

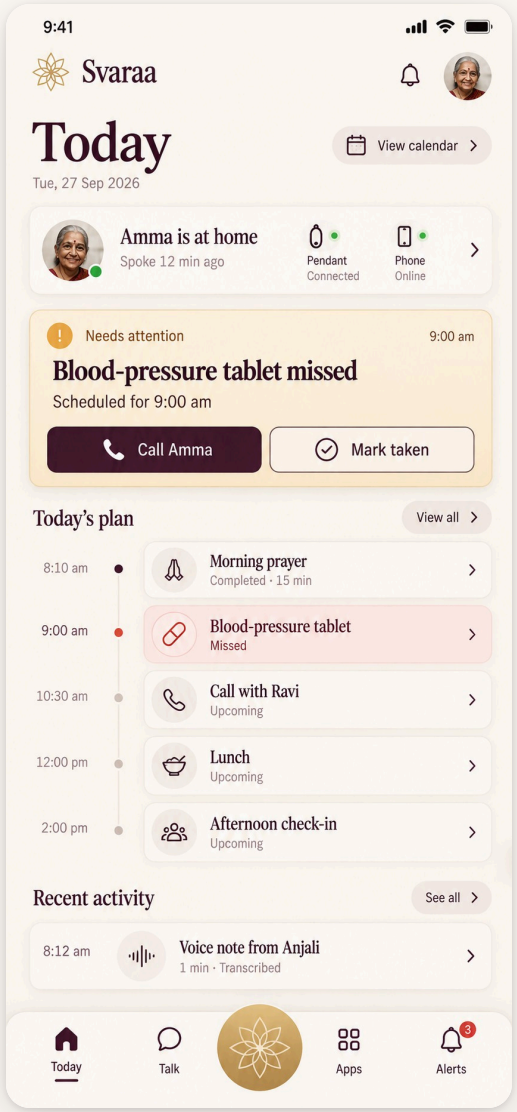

WHAT IT SHOWS

- A greeting and the next reminder in very large type.
- Four huge tiles: Talk to Svaraa, Get help, Play, My day.
- The newest family voice note, with Full app one tap away.

CHECK BEFORE HANDOFF

Get help should say "Hold for 3 seconds" and start the same countdown as the pendant; a tap-through chevron invites accidental alerts, and "emergency support" implies V1 calls emergency services, which it does not. The date reads Tue 27 Sep; 27 Sep 2026 is a Sunday and the rest of the set uses Sat 26 Sep.

Phone · Today

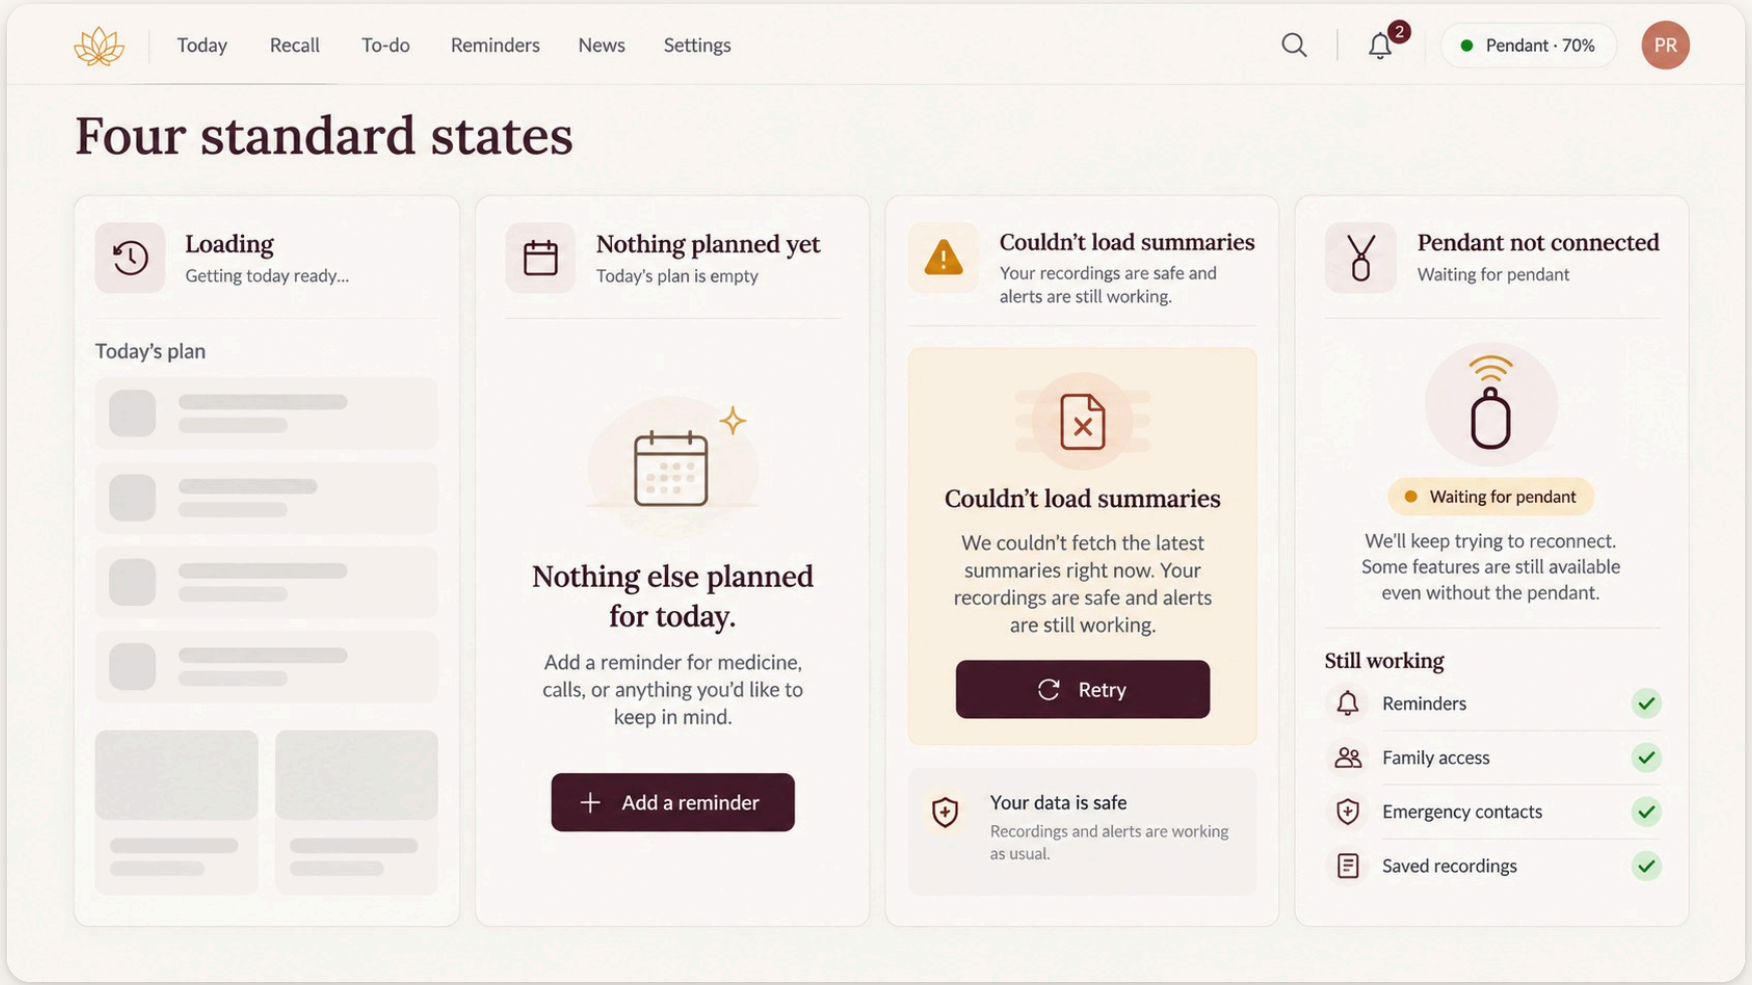

WHAT IT SHOWS

- Today in one column: status, attention card, today's plan.
- Bottom navigation with the lotus in the centre slot.
- Primary actions in thumb reach.

CHECK BEFORE HANDOFF

The missed-tablet row is red; red is reserved for safety, so use amber as the attention card does. Talk appears twice (a Talk tab and the lotus); the spec has four items with the lotus as Talk.

Four standard states

WHAT IT SHOWS

- Loading: a skeleton in the shape of the content, never a spinner alone.
- Empty and error: one clear action, and what still works.
- Pendant not connected: a Waiting for pendant chip and the list of what still works.

CHECK BEFORE HANDOFF

The Still working list should lead with what the pendant keeps doing on its own: reminders, the fall countdown with local alarm, and recording to pendant memory.
